July 20, 2011 • Donald J. Ford, Ph.D., C.P.T. • 5 min read

We have known since antiquity that the seat of learning is the human brain. But it has only been in the last decade that neuroscience researchers have been able to go inside the brain and observe how learning actually occurs at the molecular level. New technologies like diffusion imaging have opened up the brain's inner workings and allowed scientists to "see" what is going on inside the brain when people are engaged in learning. More sophisticated experiments with the brains of laboratory animals are stretching the bounds of our understanding further.

To comprehend the way learning occurs in the brain, here's a brief primer on its physiology. The brain acts as a dense network of fiber pathways consisting of approximately 100 billion ( $10^{10}$ ) neurons. The brain consists of three principle parts – stem, cerebellum and cerebrum – as shown in Figure 1 below. Of the three, the cerebrum is most important in learning, since this is where higher-ordered functions like memory and reasoning occur. Each area of the cerebrum specializes in a function – sight, hearing, speech, touch, short-term memory, long-term memory, language and reasoning abilities are the most important for learning.

Figure 1: The Human Brain

So how does learning happen? Through a network of neurons, sensory information is transmitted by synapses (see Figure 2) along the neural pathway and stored temporarily in short-term memory, a volatile region of the brain that acts like a receiving center for the flood of sensory information we encounter in our daily lives.

Marvin Oka, NLP Master Trainer, The International NLP Trainers Association. **Neuroteach** Glenn Whitman, Ian Kelleher, 2016-06-20 Teachers are brain changers. Thus it would seem obvious that an understanding of the brain, the organ of learning, would be critical to a teacher's readiness to work with students. Unfortunately, in traditional public, public charter, private, parochial, and home schools across the country, most teachers lack an understanding of how the brain receives, filters, consolidates, and applies learning for both the short and long term. *Neuroteach* was therefore written to help solve the problem teachers and school leaders have in knowing how to bring the growing body of educational neuroscience research into the design of their schools' classrooms and work with each individual student. It is our hope that *Neuroteach* will help ensure that one day every student, regardless of zip code or school type, will learn and develop with the guidance of a teacher who knows the research behind how his or her brain works and learns. **Understanding Your DNA and Mind** Bob Ainsworth, 2009-02 Why don't you have it yet?
