*Handbook on Biofuel, Ethanol and Bioenergy Based Products (Ethanol as Biofuel, Methane Gas, Biodiesel, Biogas, Biomass Gasification, Bio-Chemical, Renewable Energy, Clean-Energy, Activated Carbon, Agricultural Residues, Forestry Residues, Animal Waste, Wood Wastes, Industrial Wastes, Municipal Solid Wastes and Sewage with Machinery, Manufacturing Process, Equipment Details and Plant Layout)* P. K. Chattopadhyay, 2022-01-12. Bioenergy is biofuel derived energy. Biofuel is any fuel made from biomass such as plant or algal matter or animal waste. Biofuel is considered a renewable energy source since the feedstock material can be easily renewed, unlike fossil fuels such as petroleum, coal and natural gas. Ethanol is a naturally occurring result of plant fermentation that may also be made by hydrating ethylene. Ethanol is a widely used industrial chemical that is employed as a solvent in the production of other organic compounds and as a fuel additive forming a mixture known as a gasohol. Many alcoholic beverages such as beer, wine and distilled spirits include ethanol as a psychoactive element. Transportation fuels generated from biomass resources such as ethanol and biomass based diesel are known as biofuels. Using ethanol or biodiesel reduces the use of crude oil based gasoline and diesel, potentially lowering the amount of crude oil imported from other nations. The global biofuels market is expected to reach growth at 7.3% CAGR. Increasing demand for biofuels as automobile fuel, owing to their environment friendly characteristic to mitigate greenhouse gas emission, is expected to propel industry growth. The global ethanol fuel market is expected to reach growing at a CAGR of 6.7%. The demand for the product is driven by growing usage of the product as a biofuel. The bioenergy market is expected to register a CAGR of over 6% during the forecast period. Bioenergy is one of the renewable energy sources globally. Increasing demand for energy, advancements in bioenergy conversion technologies and increasing investment in bioenergy and declining electricity generation costs from bioenergy facilities are expected to drive the market during the forecast period. The book
