Semantic Web Technologies and Legal Scholarly Publishing Silvio Peroni,2014-06-20 This work deals with the applications of Semantic Publishing technologies in the legal domain i e the use of Semantic Web technologies to address issues related to the Legal Scholarly Publishing Research in the field of Law has a long tradition in the application of semantic technologies such as Semantic Web and Linked Data to real world scenarios This book investigates and proposes solutions for three main issues that Semantic Publishing needs to address within the context of the Legal Scholarly Publishing the need of tools for linking document text to a formal representation of its meaning the lack of complete metadata schemas for describing documents according to the publishing vocabulary and the absence of effective tools and user interfaces for easily acting on semantic publishing models and theories In particular this work introduces EARMARK a markup meta language that allows one to create markup documents without the structural and semantic limits imposed by markup languages such as XML EARMARK is a platform to link the content layer of a document with its intended formal semantics and it can be used with the Semantic Publishing and Referencing SPAR Ontologies another topic in this book SPAR Ontologies are a collection of formal models providing an upper semantic layer for describing the publishing domain Using EARMARK as a foundation for SPAR descriptions opens up to a semantic characterisation of all the aspects of a document and of its parts Finally four user friendly tools are introduced LOD2 KC Viz Graffoo and Gaffe They were expressly developed to facilitate the interaction of publishers and domain experts with Semantic Publishing technologies by shielding such users from the underlying formalisms and semantic models of such technologies *Technical specifications of radiotherapy equipment for cancer treatment* ,2021-03-05 **Enterprise Level Security 1 & 2** Kevin Foltz,William R.

Constitutional Law and the Politics of Ethnic Accommodation Bashir Mobasher, 2023-12-29 This book explores whether the legal and political institutions of Afghanistan were able to incorporate diverse ethnic groups into the political process Ethnic accommodation has gained central stage in the literature on institutional design and democratic consolidation However some divided societies are more explored than others and Afghanistan is one understudied country that is critically important for testing and improving our theories of institutional design in a democratizing plural society This work examines the Constitution of 2004 and those provisions of electoral laws and political party laws that together devised Afghan political institutions including those of the presidential system unitary government electoral systems as well as the party system It argues that due to their incongruence in design and effects the Afghan political institutions failed to fully accommodate ethnic groups in the political process This book adopts a holistic approach while also paying careful attention to the details of each of the individual pieces of political institutions designed by the Constitution of 2004 Taken together this approach yields insights into the boundaries and interactions of institutional design and how their interactions hinder or advance ethnic accommodation in varying contexts The book will be essential reading for academics researchers and policy makers interested in constitutional law and politics

Innovative Design of Electrical Devices Slawomir Wiak, Ewa Napieralska Juszczak, 2010-10-29 Computational Methods for the

Innovative Design of Electrical Devices is entirely focused on the optimal design of various classes of electrical devices. Emerging new methods like e.g. those based on genetic algorithms are presented and applied in the design optimization of different devices and systems. Accordingly the solution to field analysis problems is based on the use of finite element method and analytical methods as well. An original aspect of the book is the broad spectrum of applications in the area of electrical engineering especially electrical machines. This way traditional design criteria of conventional devices are revisited in a critical way and some innovative solutions are suggested. In particular the optimization procedures developed are oriented to three main aspects: shape design, material properties identification, machine optimal behaviour. Topics covered include: New parallel finite element solvers, Response surface method, Evolutionary computing, Multiobjective optimization, Swarm intelligence, MEMS applications, Identification of magnetic properties of anisotropic laminations, Neural networks for non destructive testing, Brushless DC motors, transformers, Permanent magnet disc motors, magnetic separators, Magnetic levitation systems.
