the Modernist Bookshop Huw Osborne, 2016-03-09 The trade in books has always been and remains an ambiguous commercial activity associated as it is with literature and the exchange of ideas This collection is concerned with the cultural and economic roles of independent bookstores and it considers how eight shops founded during the modernist era provided distinctive spaces of literary production that exceeded and yet never escaped their commercial functions As the contributors show these booksellers were essential institutional players in literary networks When the eight shops examined first opened their doors their relevance to literary and commercial life was taken for granted In our current context of box stores online shopping and ebooks we no longer encounter the book as we did as recently as twenty years ago By contributing to our understanding of bookshops as unique social spaces on the thresholds of commerce and culture this volume helps to lay the groundwork for comprehending how our relationship to books and literature has been and will be affected by the physical changes to the reading experience taking place in the twenty first century *The Encyclopedia of War, 5 Volume Set*

as a 2013 Outstanding Academic Title Recipient of a 2012 PROSE Award honorable mention **The Spatial Reformation** Michael J. Sauter, 2019-01-11 In *The Spatial Reformation* Michael J Sauter offers a sweeping history of the way Europeans conceived of three dimensional space including the relationship between Earth and the heavens between 1350 and 1850 He argues that this spatial reformation provoked a reorganization of knowledge in the West that was arguably as important as the religious Reformation Notably it had its own sacred text which proved as central and was as ubiquitously embraced Euclid's *Elements* Aside from the Bible no other work was so frequently reproduced in the early modern era According to Sauter its penetration and suffusion throughout European thought and experience call for a deliberate reconsideration not only of what constitutes the intellectual foundation of the early modern era but also of its temporal range *The Spatial Reformation* contends that space is a human construct that is it is a concept that arises from the human imagination and gets expressed physically in texts and material objects Sauter begins his examination by demonstrating how Euclidean geometry when it was applied fully to the cosmos estranged God from man enabling the breakthrough to heliocentrism and by extension the discovery of the New World Subsequent chapters provide detailed analyses of the construction of celestial and terrestrial globes Albrecht Dürer's engraving *Melencolia* the secularization of the natural history of the earth and man and Hobbes's rejection of Euclid's sense of space and its effect on his political theory Sauter's exploration culminates in the formation of a new anthropology in the eighteenth century that situated humanity in reference to spaces and places that human eyes had not actually seen *The Spatial Reformation* illustrates how these disparate advancements can be viewed as resulting expressly from early modernity's embrace of Euclidean geometry *Reader's Digest Illustrated History of South Africa* Dougie Oakes, 1989 A record of all races and history of South Africa featuring notable personalities and pivotal events

Molecular Origins of Brain and Body Geometry Antonio Lima-de-Faria, 2014-10-07 New concepts arise in science when apparently unrelated fields of knowledge are put together in a coherent way The recent results in molecular biology allow to explain the emergence of body patterns in animals that before could not be understood by zoologists There are no fancy curiosities in nature Every pattern is a product of a molecular cascade originating in genes and a living organism arises from the collaboration of these genes with the outer physical environment Tropical fishes are as startling in their colors and geometric circles as peacocks Tortoises are covered with the most regular triangles squares and concentric circles that can be green brown or yellow Parallel scarlet bands are placed side by side of black ones along the body of snakes Zebras and giraffes have patterns which are lessons in geometry with their transversal and longitudinal stripes their circles and other geometric figures Monkeys like the mandrills have a spectacularly colored face scarlet nose with blue parallel flanges and yellow beard All this geometry turns out to be highly molecular The genes are many and have been DNA sequenced Besides they not only deal with the coloration of the body but with the development of the brain and the embryonic process A precise scenario of molecular events unravels in the vertebrates It may seem far fetched but the search for the origin of this

geometry made it mandatory to study the evolution of matter and the origin of the brain. It turned out that matter from its onset is pervaded by geometry and that the brain is also a prisoner of this ordered construction. Moreover, the brain is capable of altering the body geometry and the geometry of the environment changes the brain. Nothing spectacular occurred when the brain arrived in evolution. Not only it came after the eye which had already established itself long ago but it had a modest origin. It started from sensory cells on the skin that later aggregated into clusters of neurons that formed ganglia. It also became evident that pigment cells that decide the establishment of the body pattern originate from the same cell population as neurons, the neural crest cells. This is a most revealing result because it throws light on the power that the brain has to rapidly redirect the coloration of the body and to change its pattern. Recent experiments demonstrate how the brain changes the body geometry at will and within seconds, an event that could be hardly conceived earlier. Moreover, this change is not accidental; it is related to the surrounding environment and is also used as a mating strategy. Chameleons know how to do it as well as flat fishes and octopuses. No one would have dared to think that the brain had its own geometry. How could the external geometry of solids or other figures of our environment be apprehended by neurons if these had no architecture of their own? Astonishing was that the so-called simple cells in the neurons of the primary visual cortex responded to a bar of light with an axis of orientation that corresponded to the axis of the cell's receptive field. We tend to consider our brain a reliable organ. But how reliable is it? From the beginning, the brain is obliged to transform reality. Brain imagery involves form, color, motion, and sleep. Unintentionally, these results led to unexpected philosophical implications. Plato's pivotal concept that forms exist independently of the material world is reversed. Atoms have been considered to be imaginary for 2,000 years but at present they can be photographed one by one with electron microscopes. The reason why geometry has led the way in this inquiry is due to the fact that where there is geometry, there is utter simplicity coupled to rigorous order that underlies the phenomenon where it is recognized. Order allows variation but imposes at the same time a canalization that is patent in what we call evolution.

Downtown Pete Hamill, 2004-12-01 In this beautifully written, sharply observed and heartfelt guide to his hometown, New York Times legendary New York City journalist Pete Hamill leads us on an unforgettable journey through the city he loves. Walking the Manhattan streets he loves from Times Square to the island's southern tip, Pete Hamill combines a moving memoir of his own days and nights in New York with a lively and revealing history of the city's most enduring places and people. Pete Hamill lovingly captures the vibrant sights, sounds, and smells of Manhattan from Battery Park to midtown, the most important, most exciting stretch of real estate in the world. *New York Daily News* [The British National Bibliography](#) Arthur James Wells, 2001 *The Message of the City* Patricia E.

Palermo, 2016-05-27 Dawn Powell was a gifted satirist who moved in the same circles as Dorothy Parker, Ernest Hemingway, renowned editor Maxwell Perkins, and other midcentury New York luminaries. Her many novels are typically divided into two groups: those dealing with her native Ohio and those set in New York. From the moment she left behind her harsh upbringing

in Mount Gilead Ohio and arrived in Manhattan in 1918 she dove into city life with an outlander's anthropological zeal reads a recent New Yorker piece about Powell and it is those New York novels that built her reputation for scouring wit and social observation In this critical biography and study of the New York novels Patricia Palermo reminds us how Powell earned a place in the national literary establishment and East Coast social scene Though Powell's prolific output has been out of print for most of the past few decades a revival is under way the Library of America touting her as a rediscovered American comic genius released her collected novels and in 2015 she was posthumously inducted into the New York State Writer's Hall of Fame Engaging and erudite *The Message of the City* fills a major gap in in the story of a long overlooked literary great Palermo places Powell in cultural and historical context and drawing on her diaries reveals the real life inspirations for some of her most delicious satire

Genre Imagery in Early Modern Northern Europe ArthurJ. DiFuria,2017-07-05 Exploring the rich variety of pictorial rhetoric in early modern northern European genre images this volume deepens our understanding of genre's place in early modern visual culture From 1500 to 1700 artists in northern Europe pioneered the category of pictures now known as genre portrayals of people in ostensibly quotidian situations Critical approaches to genre images have moved past the antiquated notion that they portray uncomplicated slices of life describing them instead as heavily encoded pictorial essays laden with symbols that only the most erudite contemporary viewers and modern iconographers could fully comprehend These essays challenge that limiting binary revealing a more expansive array of accessible meanings in genre's deft grafting of everyday scenarios with a rich complex of experiential cultural political and religious references Authors deploy a variety of approaches to detail genre's multivalent relations to older more established pictorial and literary categories the interplay between the meaning of the everyday and its translation into images and the multifaceted concerns genre addressed for its rapidly expanding unprecedentedly diverse audience

Illustrated History of South Africa Dougie Oakes,1992 This updated version of the 1988 edition strips away the curtain of myths and misconceptions that surround South Africa Much has happened and is still happening in this troubled land so to better understand the events of recent years the final two chapters have been revised and three new chapters have been added 1 000 color photos maps and illustrations

Women in Early British and Irish Astronomy Mary Brück,2009-07-25 Careers in astronomy for women as in

other sciences were a rarity in Britain and Ireland until well into the twentieth century The book investigates the place of women in astronomy before that era recounted in the form of biographies of about 25 women born between 1650 and 1900 who in varying capacities contributed to its progress during the eighteenth nineteenth and early twentieth centuries There are some famous names among them whose biographies have been written before now there are others who have received less than their due recognition while many more occupied inconspicuous and sometimes thankless places as assistants to male family members All deserve to be remembered as interesting individuals in an earlier opportunity poor age Placed in roughly chronological order their lives constitute a sample thread in the story of female entry into the male world of science The book is aimed at astronomers amateur astronomers historians of science and promoters of women in science but being written in non technical language it is intended to be of interest also to educated readers generally

British University Observatories 1772-1939 Roger Hutchins, 2017-03-02 British University Observatories fills a gap in the historiography of British astronomy by offering the histories of observatories identified as a group by their shared characteristics The first full histories of the Oxford and Cambridge observatories are here central to an explanatory history of each of the six that undertook research before World War II Oxford Dunsink Cambridge Durham Glasgow and London Each struggled to evolve in the middle ground between the royal observatories and those of the Grand Amateurs in the nineteenth century Fundamental issues are how and why astronomy came into the universities how research was reconciled with teaching lack of endowment and response to the challenge of astrophysics One organizing theme is the central importance of the individual professor directors in determining the fortunes of these observatories the community of assistants and their role in institutional politics sometimes of the murkiest kind patronage networks and discipline shaping coterie The use of many primary sources illustrates personal motivations and experience This book will intrigue anyone interested in the history of astronomy of telescopes of scientific institutions and of the history of universities The history of each individual observatory can easily be followed from foundation to 1939 or compared to experience elsewhere across the period Astronomy is competitive and international and the British experience is contextualised by comparison for the first time to those in Germany France Italy and the USA

Reconsidering a Century of Flight Janet Rose Daly Bednarek, Roger D. The Sea Their Graves David J. Stewart, 2019-04-08 Like other groups with dangerous occupations mariners have developed a close knit culture bound by loss and memory Death regularly disrupts the fabric of this culture and necessitates actions designed to mend its social structure From the ritual of burying a body at sea to the creation of memorials to honor the missing these events tell us a great deal about how sailors see their world Based on a study of more than 2 100 gravestones and monuments in North America and the United Kingdom erected

between the seventeenth and late twentieth centuries David Stewart expands the use of nautical archaeology into terrestrial environments He focuses on those who make their living at sea one of the world s oldest and most dangerous occupations to examine their distinct folkloric traditions beliefs and customs regarding death loss and remembrance
