Global Vessel-Source Maritime Pollution Governance—Technical Innovation and Policy Orientation Lang Xu,Zheng Wan,Jihong Chen,2023-09-25 The maritime industry plays an important role in international trade activities and the global economy It is estimated that international shipping carries approximately 80% of global trade by volume and more than 70% by value However increasing maritime activities have had a negative impact on the marine environment and human health For example in November 2002 a tanker carrying 77000 tons of fuel oil sank in the Bay of

Biscay which polluted thousands of kilometers of Western European coasts rivers streams and swamps Oil spills caused by ship accidents and other pollution associated with maritime activities have attracted considerable attention in the research community A large number of studies on shipping pollution have been conducted across different disciplines However new challenges are emerging in maritime operation and management leading to research questions related to intelligent technology and environmental protection maritime pollution and governance maritime accidents and environmental emergency
