DevOps For Beginners Joseph Joyner, 2015-10-21 Isn't it surprising to see the application development team and the operations team working together? It is definitely is as they are always in seclusion for a very long time. But now when they have started working together the results are even more stunning. This concept of making the development team and operations team work together was introduced by DevOps process.

Future Intent-Based Networking Mikhailo Klymash, Mykola Beshley, Andriy Luntovskyy, 2021-12-09 So called Intent Based Networking (IBN) is founded on well known SDN (Software Defined Networking) and represents one of the most important emerging network infrastructure opportunities. The IBN is the beginning of a new era in the history of networking where the network itself translates business intentions into appropriate network configurations for all devices. This minimizes manual effort, provides an additional layer of network monitoring and provides the ability to perform network analytics and take full advantage of machine learning. The centralized software defined solution provides process automation and proactive problem solving as well as centralized management of the network infrastructure. With software based network management many operations can be performed automatically using intelligent control algorithms, artificial intelligence and machine learning. As a result, network operation costs, application response times and energy consumption are reduced, network reliability and performance are improved, network security and flexibility are enhanced. This will be a benefit for existing networks as well as evolved LTE based mobile networks emerging Internet of Things (IoT) Cloud systems and soon for the future 5G/6G networks. The future networks will reach a whole new level of self awareness, self configuration, self optimization, self recovery and self protection. This volume consists of 28 chapters based on recent research on IBN. The volume is a collection of the most important research for the future intent based networking deployment provided by different groups of researchers from Ukraine, Germany, Slovak Republic, Switzerland, South Korea, China, Czech Republic, Poland, Brazil, Belarus and Israel. The authors of the chapters from this collection present in depth extended research results in their scientific fields. The presented contents are highly interesting.
