Digital Pictures Representation Compression And Standards Applications Of Communications Theory:

Digital Pictures Arun Netravali, 2012-12-24 For thousands of years mankind has been creating pictures which attempt to portray real or imagined scenes as perceived by human vision Cave drawings paintings and photographs are able to stimulate the visual system and conjure up thoughts of faraway places imagined situations or pleasant sensations The art of motion picture creation has advanced to the point where viewers often undergo intense emotional experiences On the spot news coverage gives the impression of actually witnessing events as they unfold Relatively recently other forms of visual information have been invented which do not in themselves stimulate the eye For example voltage variations in an electrical signal as in television can represent in analogous fashion the brightness variations in a picture In this form the visual information can be stored on magnetic tape or transmitted over long distances and at least for engineering purposes it is often much more useful than other forms which do stimulate human vision With the evolution of digital techniques for information processing storage and transmission the need arises for digital representation of visual information that is the representation of images by a sequence of integer numbers usually binary In this form computer processing and digital circuit techniques can be utilized which were undreamed of only a short time ago Machine manipulation and interpretation of visual information becomes possible Sophisticated techniques can be employed for efficient storage of images And processing methods can be used to significantly reduce the costs of picture transmission Digital Pictures Arun N.

The migration of immersive media towards telecommunication applications is advancing rapidly Impressive progress in the field of media compression media representation and the larger and ever increasing bandwidth available to the customer will foster the introduction of these services in the future One of the key components for the envisioned applications is the development from two dimensional towards three dimensional audio visual communications With contributions from key experts in the field 3D Videocommunication provides a complete overview of existing systems and technologies in 3D video communications and provides guidance on future trends and research considers all aspects of the 3D videocommunication processing chain including video coding signal processing and computer graphics focuses on the current state of the art and highlights the directions in which the technology is likely to move discusses in detail the relevance of 3D videocommunication for telepresence systems and immersive media and provides an exhaustive bibliography for further reading Researchers and students interested in the field of 3D audio visual communications will find 3D Videocommunication a valuable resource covering a broad overview of the current state of the art Practical engineers from industry will also find it a useful tool in envisioning and building innovative applications **Color Image Processing and Applications** Konstantinos N.

Plataniotis, Anastasios N. Venetsanopoulos, 2013-04-17 Reporting the state of the art of color image processing this monograph fills an existing gap in the literature on digital signal and image processing It can serve the needs of different users at different levels as a textbook which covers a graduate image processing course as a up to date reference for researchers since it offers a broad survey of the relevant literature and as a relevant information source for development engineers who work in the design and the implementation of various image processing tasks Part of the material in the book was the basis of seminars at the University of Toronto The book contains numerous examples and pictures of color image processing results as well as tables which summarize the results of the analysis Algorithms implemented in JAVA can be downloaded from the author s website Synchronization Techniques for Digital Receivers Umberto Mengali, 1997-10-31 Synchronization is a critical function in digital communications its failures may have catastrophic effects on the transmission system performance Furthermore synchronization circuits comprehend such a large part of the receiver hardware that their implementation has a substantial impact on the overall costs For these reasons design engineers are particularly concerned with the development of new and more efficient synchronization structures Unfortunately the advent of digital VLSI technology has radically affected modem design rules to a point that most analog techniques employed so far have become totally obsolete Although digital synchronization methods are well established by now in the literature they only appear in the form of technical papers often concentrating on specific performance or implementation issues As a consequence they are hardly useful to give a unified view of an otherwise seemingly heterogeneous field It is widely recognized that a fundamental understanding of digital synchronization can only be reached by providing the designer with a solid theoretical framework or else he will not know where to adjust his methods when he attempts to apply them to new situations The task of the present book is just to develop such a framework **Digital Video Image Quality and Perceptual Coding** H.R. Wu, K.R. Rao, 2017-12-19 The hand is quicker than the eye In many cases so is digital video Maintaining image quality in bandwidth and memory restricted environments is quickly becoming a reality as thriving research delves ever deeper into perceptual coding techniques which discard superfluous data that humans cannot process or detect Surveying the topic from a Human Visual System HVS based approach Digital Video Image Quality and Perceptual Coding outlines the principles metrics and standards associated with perceptual coding as well as the latest techniques and applications This book is divided broadly into three parts First it introduces the fundamental theory concepts principles and techniques underlying the field such as the basics of compression HVS modeling and coding artifacts associated with current well known techniques The next section focuses on picture quality assessment criteria subjective and objective methods and metrics including vision model based digital video impairment metrics testing procedures and international standards regarding image quality Finally practical applications come into focus including digital image and video coder designs based on the HVS as well as post filtering restoration error correction and concealment techniques The permeation of digital images and video throughout the

world cannot be understated Nor can the importance of preserving quality while using minimal storage space and Digital Video Image Quality and Perceptual Coding provides the tools necessary to accomplish this goal Instructors and lecturers wishing to make use of this work as a textbook can download a presentation of 786 slides in PDF format organized to augment the text accompany our book H R Wu and K R Rao Digital Video Image Quality and Perceptual Coding CRC Press ISBN 0 8247 2777 0 Nov 2005 for lecturers or instructor to use for their classes if they use the book

Digital Image Processing and Analysis Scott E Umbaugh, 2017-11-30 Digital image processing and analysis is a field that continues to experience rapid growth with applications in many facets of our lives Areas such as medicine agriculture manufacturing transportation communication systems and space exploration are just a few of the application areas This book takes an engineering approach to image processing and analysis including more examples and images throughout the text than the previous edition It provides more material for illustrating the concepts along with new PowerPoint slides The application development has been expanded and updated and the related chapter provides step by step tutorial examples for this type of development The new edition also includes supplementary exercises as well as MATLAB based exercises to aid both the reader and student in development of their skills

TRACK 1 Innovative Applications in the Public Sector The integration of multimedia based applications and the information superhighway fundamentally concerns the creation of a communication technology to support the activities of people Communication is a profoundly social activity involving interactions among groups or individuals common standards of exchange and national infrastructures to support telecommunications activities The contributions of the invited speakers and others in this track begin to explore the social dimension of communication within the context of integrated information systems for the public sector Interactions among businesses and households are described by Ralf Strauss through the development within a real community of a wired city with information and electronic services provided by the latest telecommunications technologies A more specific type of interaction between teacher and student forms the basis of education John Tiffin demonstrates how virtual classrooms can be used to augment the educational process Carl Loeffler presents yet another perspective on interaction through the integration of A life and agent technologies to investigate the dynamics of complex behaviors within networked simulation environments Common standards for communication in the form of electronic documents or CSCW Computer Supported Cooperative Work according to Roland Traunmiiller provide enabling technologies for a paradigm shift in the management of organizations As pointed out by William Olle the impact of standardization work on the future of information technology depends critically upon the interoperability of software systems
