is a collection of essays on complex symmetries. It is curated emphasizing the analysis of the symmetries not the various phenomena that display those symmetries themselves. With this the volume provides insight to nonspecialist readers into how individual simple symmetries constitute complex symmetry. The authors and the topics cover many different disciplines in various sciences and arts. Simple symmetries such as reflection, rotation, translation, similitude, and a few other simple manifestations of the phenomenon are all around and we are aware of them in our everyday lives. However, there are myriads of complex symmetries composed of a bulk of simple symmetries as well. For example, the well-known helix represents the combination of translational and rotational symmetry. Nature produces a great variety of such complex symmetries. So do the arts. The contributions in this volume analyse selected examples not limited to geometric symmetries. These include physical symmetries, functional meaning, not morphological symmetries such as symmetries in the construction of the genetic code, symmetries in human perception, e.g. in geometry education, as well as in constructing physical theories, symmetries in fractal structures and structural morphology including quasicrystal and fullerene structures in stable bindings and their applications in crystallography and architectural design, as well as color symmetries in the arts. The volume is rounded off with beautiful illustrations and presents a fascinating panorama of this interdisciplinary topic.

**Poetry in English and Metal Music** Arturo Mora-Rioja,2023-05-05 Many metal songs incorporate poetry into their lyrics using a broad array of techniques both textual and musical This book develops a novel adaptation appropriation and quotation taxonomy that both expands our knowledge of how poetry is used in metal music and is useful for scholars across adaptation studies broadly The text follows both a quantitative and a qualitative approach It identifies 384 metal songs by 224 bands with intertextual ties to 146 poems written by fifty one different poets with a special focus on Edgar Allan Poe John Milton's Paradise Lost and the work of WWI's War Poets This analysis of transformational mechanisms allows poetry to find an afterlife in the form of metal songs and sheds light on both the adaptation and appropriation process and on the semantic shifts occasioned by the recontextualisation of the poems into the metal music culture Some musicians reuse and sometimes amplify old verses related to politics and religion in our present times others engage in criticism or simple contradiction In some cases the bands turn the abstract feelings evoked by the poems into concrete personal experiences The most adventurous recraft the original verses by changing the point of view of either the poetic voice or the addressed actors altering the vocaliser of the narrative or the gender of the protagonists These mechanisms help metal musicians make the poems their own and adjust them to their artistic needs so that the resulting product is consistent with the expectations of the metal music culture
