Workbook Joyce A. Cascio,2005-05 **Making Presentation Math Computable** André Greiner-Petter,2022-12-31 This
Open Access book addresses the issue of translating mathematical expressions from LaTeX to the syntax of Computer
Algebra Systems CAS Over the past decades especially in the domain of Sciences Technology Engineering and Mathematics
STEM LaTeX has become the de facto standard to typeset mathematical formulae in publications Since scientists are
generally required to publish their work LaTeX has become an integral part of today s publishing workflow On the other hand
modern research increasingly relies on CAS to simplify manipulate compute and visualize mathematics However existing
LaTeX import functions in CAS are limited to simple arithmetic expressions and are therefore insufficient for most use cases
Consequently the workflow of experimenting and publishing in the Sciences often includes time consuming and error prone
manual conversions between presentational LaTeX and computational CAS formats To address the lack of a reliable and
comprehensive translation tool between LaTeX and CAS this thesis makes the following three contributions First it provides
an approach to semantically enhance LaTeX expressions with sufficient semantic information for translations into CAS
syntaxes Second it demonstrates the first context aware LaTeX to CAS translation framework LaCAsT Third the thesis
provides a novel approach to evaluate the performance for LaTeX to CAS translations on large scaled datasets with an
automatic verification of equations in digital mathematical libraries This is an open access book Programming Logics
Andrei Voronkov,Christoph Weidenbach,2013-04-05 This Festschrift volume published in memory of Harald Ganzinger
contains 17 papers from colleagues all over the world and covers all the fields to which Harald Ganzinger dedicated his work
during his academic career The volume begins with a complete account of Harald Ganzinger s work and then turns its focus
to the research of his former colleagues students and friends who pay tribute to him through their writing Their individual
papers span a broad range of topics including programming language semantics analysis and verification first order and
higher order theorem proving unification theory non classical logics reasoning modulo theories and applications of
automated reasoning in biology **Mathematics of Program Construction** Philippe Audebaud,2008-07-04 This book
constitutes the refereed proceedings of the 9th International Conference on Mathematics of Program Construction MPC 2008
held in Marseille France in July 2008 The 18 revised full papers presented together with 1 invited talk were carefully
reviewed and selected from 41 submissions Issues addressed range from algorithmics to support for program construction in
programming languages and systems Topics of special interest are type systems program analysis and transformation
