Analytic Solutions of Functional Equations Sui Sun Cheng, Wenrong Li, 2008 The purpose of this volume is to examine bio informatics and quantum information which are growing rapidly at present and to attempt to connect the two with a view to enumerating and solving the many fundamental problems they entail To this end we look for interdisciplinary bridges in mathematics physics and information and life sciences In particular research into a new paradigm for information science and life science on the basis of quantum theory is emphasized

A Discrete Hilbert Transform with Circle Packings Dominik Volland, 2017-12-01 Dominik Volland studies the construction of a discrete counterpart to the Hilbert transform in the realm of a nonlinear discrete complex analysis given by circle packings The Hilbert transform is closely related to Riemann Hilbert problems which have been studied in the framework of circle packings by E Wegert and co workers since 2009 The author demonstrates that the discrete Hilbert transform is well defined in this framework by proving a conjecture on discrete problems formulated by Wegert Moreover he illustrates its properties by carefully chosen numerical examples

Lecture Notes on Acoustics and Noise Control Hejie Lin, Turgay Bengisu, Zissimos P. Mourelatos, 2022-01-03 This textbook provides a guide to the fundamental principles of acoustics in a straightforward manner using a solid foundation in mathematics and physics It is designed for those who are new to acoustics and noise control and includes all the necessary material for a comprehensive understanding of the topic It is written in lecture note style and can be easily adapted to an acoustics related one semester course at the senior undergraduate or graduate level The book also serves as a ready reference for the

practicing engineer new to the application of acoustic principles arising in product design and fabrication Sinc Methods for Quadrature and Differential Equations John Lund, Kenneth L. Bowers, 1992-01-01 Here is an elementary development of the Sinc Galerkin method with the focal point being ordinary and partial differential equations This is the first book to explain this powerful computational method for treating differential equations These methods are an alternative to finite difference and finite element schemes and are especially adaptable to problems with singular solutions The text is written to facilitate easy implementation of the theory into operating numerical code The authors use of differential equations as a backdrop for the presentation of the material allows them to present a number of the applications of the sinc method Many of these applications are useful in numerical processes of interest quite independent of differential equations Specifically numerical interpolation and quadrature while fundamental to the Galerkin development are useful in their own right **Publications of the National Bureau of Standards** United States. Willem Hundsdorfer, Jan G. Verwer, 2013-04-17 This book deals with numerical methods for solving partial differential equations PDEs coupling advection diffusion and reaction terms with a focus on time dependency A combined treatment is presented of methods for hyperbolic problems thereby emphasizing the one way wave equation methods for parabolic problems and methods for stiff and non stiff ordinary differential equations ODEs With regard to time dependency we have attempted to present the algorithms and the discussion of their properties for the three different types of differential equations in a unified way by using semi discretizations i.e the method of lines whereby the PDE is transformed into an ODE by a suitable spatial discretization In addition for hyperbolic problems we also discuss discretizations that use information based on characteristics Due to this combination of methods this book differs substantially from more specialized textbooks that deal exclusively with numerical methods for either PDEs or ODEs We treat integration methods suitable for both classes of problems This combined treatment offers a clear advantage On the one hand in the field of numerical ODEs highly valuable methods and results exist which are of practical use for solving time dependent PDEs something which is often not fully exploited by numerical PDE researchers Although many problems can be solved by Euler's method or the Crank Nicolson method better alternatives are often available which can significantly reduce the computational effort needed to solve practical problems
