Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of

objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers *Hopeful Pedagogies in Higher Education* Mike Seal, 2021-05-20 Many accounts of critical pedagogy particularly accounts of trying to enact it within higher education HE express a deep cynicism about whether it is possible to counter the ever creeping hegemony of neo liberalism neo conservatism and new managerialism within Universities *Hopeful Pedagogies in Higher Education* acknowledges some of these criticisms but attempts to rescue critical pedagogy locating some of its associated pessimism as misreading of Freire and offering hopeful avenues for new theory and practice These misreadings are also located in the present in the assumption that unless change comes within the lifetime of the project it has somehow failed Instead this book argues that a positive utopianism is possible Present actions need to be celebrated and cultivated as symbols of hope possibility and generativity for the future which the concept of hope implies The contributors make the case for celebrating the pedagogies of HE that operate in liminal spaces situated in the spaces between the present and the future between the world as it is and the world as it could be and also in the cracks that are beginning to show in the dominant discourses
