**Manufacturing Execution System - MES** Jürgen Kletti, 2007-05-01. The transformation of the classic factory from a production facility into a modern service center has resulted in management problems for which many companies are not yet prepared. The economic efficiency of modern value creation is not a property of the products but rather of the process. What this means is that the decisive potentials of companies are to be found not so much in their production capability but in their process capability. For manufacturers the requirement for process capability which has in the meantime become the basis of the certification codes gives rise in turn to the requirement that all value adding processes be geared to the process result and thus to the customer. A necessary condition of process transparency is the ability to map the company's value stream in real time without the acquisition process involving major outlay. A capability which is beyond the dominant ERP systems. Today modern manufacturing execution systems MES can offer real time applications. They generate current and even historical maps for production equipment and can thus be used as a basis for optimization processes. As early as the beginning of the 1980s work started on methods of this kind which were then known as production data acquisition or machine data collection. But while the main emphasis in the past was on achieving improvements in machine utilization today the concern is predominantly to obtain real time mapping of the value stream supply chain.

*The Intelligent Factory* Otto Schell,Jörg Minge,Dominik Metzger,Volker Stockrahm,2021-12-13 Disruptions in global supply chains have rarely ever caused more headlines than at the moment The nature of internationally connected supply chains has been to take advantage of globalization strategies for sourcing production and distribution of products and materials Consequently there is hardly any industry that is not highly globalized and vulnerable to disruption Now while these disruptions have varying impacts on industries and individual companies the hypothesis discussed in this book is that executing a strict digitalization strategy based on Industry 4 0 principles helps manufacturing companies master these disruptions and even turn them into opportunities Implementing Industry 4 0 strategies increases productivity and agility for manufacturing operations and provides much higher visibility Consequently the resiliency against supply chain disruptions is significantly increased This book covers Introduction to Industry 4 0 principles How to execute an Industry 4 0 strategy Insights into SAP s strategy Industry 4 Now Case study examples Business Process Engineering August-Wilhelm Scheer,2012-12-06 The first English language edition of this book was published in 1989 under the title Enterprise Wide Data Modelling It introduced a new enterprise data model that has since gone on to enjoy widespread use as a reference model Since that time the author has continued to develop the representation of application problems both on a theoretical basis using modeling languages and on a practical basis using real world studies This has led to so many new aspects that this second English language edition the original German version is now in its fifth edition constitutes a completely new book The new title expresses the stricter emphasis on business processes in contrast to the previous edition which was geared more toward a functional structure This approach reflects the trend toward process oriented structural and procedural

organization in enterprises that is currently being supported by new means of information processing Perhaps the most obvious way in which the second English language edition differs from the first is in the increased number of pages This is a direct result of the higher degree of detail and the more thorough problem description presented in the new edition The degree of detail has increased in the case of those problems that are particularly important in terms of selecting and designing information systems in an industrial enterprise e g the product description and CAM factory organization This approach provides greater reality and thus facilitates a better understanding of the complex organism that is an industrial enterprise
