The Grand Food Bargain Kevin D. Walker, 2019-03-26 When it comes to food Americans seem to have a pretty great deal Our grocery stores are overflowing with countless varieties of convenient products But like most bargains that are too good to be true the modern food system relies on an illusion It depends on endless abundance but the planet has its limits So too does a healthcare system that must absorb rising rates of diabetes and obesity So too do the workers who must labor harder and faster for less pay Through beautifully told stories from around the world Kevin Walker reveals the unintended consequences of our myopic focus on quantity over quality A trip to a Costa Rica plantation shows how the Cavendish banana became the most common fruit in the world and also one of the most vulnerable to disease Walker's early career in agribusiness taught him how pressure to sell more and more fertilizer obscured what that growth did to waterways His family farm illustrates how an unquestioning belief in free markets undercut opportunity in his hometown By the end of the journey we not only understand how the drive to produce ever more food became hardwired into the American psyche but why shifting our mindset is essential It starts Walker argues with remembering that what we eat affects the wider world If each of us decides that bigger isn't always better we can renegotiate the grand food bargain one individual decision at a time

of systems boundaries defining the functional unit handling coproduction and the choosing of impact assessment methods The second chapter explores the concepts of LCA and the coffee value chain The chapter discusses how carbon footprint performances can be used to upgrade coffee value chains The third chapter assesses the environmental impact of oil palm production during cultivation and as a result of land use change for new plantations The chapter describes the principles and modelling steps of LCA as well as the challenges ahead regarding further development and application The fourth chapter reviews the core principles of LCA methodology the state of the art of LCA for fruits and associated key challenges The first complete LCA case study for export mango is also discussed The final chapter assesses the environmental impact of banana production and highlights the importance of LCA in influencing the adoption of practices that can reduce or offset the carbon footprint of the banana value chain

Sustainable Horticultural Systems Dilip Nandwani, 2014-10-14 Sustainable horticulture is gaining increasing attention in the field of agriculture as demand for the food production rises to the world community Sustainable horticultural systems are based on ecological principles to farm optimizes pest and disease management approaches through environmentally friendly and renewable strategies in production agriculture It is a discipline that addresses current issues such as food security water pollution soil health pest control and biodiversity depletion Novel environmentally friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy soil science entomology ecology chemistry and food sciences Sustainable horticulture interprets methods and processes in the farming system to the global level For that horticulturists use the system approach

that involves studying components and interactions of a whole system to address scientific economic and social issues In that respect sustainable horticulture is not a classical narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable horticulture treats problem sources *Global Governance of Labour Rights* Axel Marx, Jan Wouters, Glenn Rayp, Laura Beke, 2015-11-27 Stories and images of collapsed factories burned down sweatshops imprisoned migrant workers child workers and many other violations of internationally recognized labour rights continue to spread across the globe This highly topical book examines the different instruments which are intended to protect labour rights on a transnational scale and asks whether they make a difference With perspectives from law management sociology political science and political economy the topics discussed include the protection of international labour rights in a globalizing economy the EU's social dimension in its external trade relations Asian and US perspectives on labour rights in international trade agreements the role of trade unions in global labour governance and the transformative capacity of private labour governance regimes Academics and advanced students from different disciplines will benefit from the up to date empirical material in this study Policymakers NGOs and Unions will find the discussions of the instruments used to protect labour rights of great value to their work *Environmental Politics for a Changing World* Ronnie D. Lipschutz, Doreen Stabinsky, 2018-07-12 This book argues that environmental problems are first and foremost political and therefore about power Using a framework of political economy and political ecology the authors deconstruct current environmental problems to identify root causes and address those problems through mobilization of collective action and social power The second edition also offers Updated examples and stories of political struggles and the actors involved Explicit attention to various forms of power in environmental politics including structural and social power Local politics and collective action as related to global environmental politics Discussion of emerging issues such as synthetic biology commodification and financialization of nature including carbon markets and geoengineering *Banana: Genomics and Transgenic Approaches for Genetic Improvement* Sukhada Mohandas, Kundapura V. Ravishankar, 2016-09-08 Bananas and plantains are among the most important food and cash crops in the world They are cultivated in more than 135 countries across the tropics and subtropics with an annual global production of ca 130 million metric tonnes Though bananas are one of the most important components of food security in many developing countries banana production is threatened by both abiotic and biotic stresses These include a wide range of diseases and pests such as bunchy top virus burrowing nematodes black Sigatoka or black leaf streak Fusarium wilt etc In recent years considerable progress has been made and several biotechnological and genomic tools have been employed to help understand and unravel the mysterious banana genome Molecular and genomic studies have helped to decipher the Musa genome and its evolution Genetic linkage map and whole genome sequencing of both Musa acuminata and Musa balbisiana progenitors of cultivated banana have completely changed the way of thinking and the approach on banana crop improvement Whole genome sequencing has helped to improve the

selection of quantitative traits such as yield as well as the selection of optimal parents for developing required hybrids in breeding programs Gene isolation and the analysis of mutants have helped in the characterization of genes of agronomic value and the associated regulatory sequences With the advent of molecular markers and new statistical tools it is now possible to measure the diversity identify genes and useful alleles linked to important agronomic traits Further these alleles can be incorporated into cultivars through marker assisted selection or through transgenic approach Transgenic approaches are potential tools for direct transfer of these genes into popular cultivars which are generally not amenable for conventional breeding techniques in specific with crops such as bananas which are sterile triploid and heterozygous thereby making it difficult to reconstruct the recurrent genotypes in banana Transgenic techniques thus have helped overcome the difficulty of working with sterile triploid banana crop In the last five years enormous amount of new information and techniques have been generated for banana A comprehensive book entitled *Banana Genomics and Transgenic Approaches for Genetic improvement on banana genomics latest transgenic technologies and tools available for improved crop development in banana will address all these requirements* *Fusarium wilt of Banana, a Recurring Threat to Global Banana Production* Gert H.
