Rational Expectations in Macroeconomic Models P. Fisher, 2013-04-17 It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents' expectations. Over the last decade, mainstream macroeconomic models in the UK and elsewhere have taken on board the Rational Expectations Revolution by explicitly incorporating expectations of the future. In principle, one can perform the same technical exercises on a forward expectations model as on a conventional model, and more. *Rational Expectations in Macroeconomic Models* deals with the numerical methods necessary to carry out policy analysis and forecasting with these models. These methods are often passed on by word of mouth or confined to obscure journals. *Rational Expectations in Macroeconomic Models* brings them together with applications which are interesting in their own right. There is no comparable textbook in the literature. The specific subjects include: i) solving for model-consistent expectations; ii) the choice of terminal condition and time horizon; iii) experimental design; i.e. the effect of temporary vs. permanent, anticipated vs. unanticipated shocks; deterministic vs. stochastic; dynamic vs. static simulation; iv) the role of exchange rate; v) optimal control and inflation/output tradeoffs. The models used are those of the Liverpool Research Group in Macroeconomics, the London Business School, and the National Institute of Economic and Social Research.

Value Solutions in Cooperative Games Roger A. McCain, 2013 This book introduces new concepts for cooperative game theory and particularly solutions that determine the distribution of a coalitional surplus among the members of the coalition. It also addresses several generalizations of cooperative game theory. Drawing on methods of welfare economics, new value solutions are derived for Non-Transferable Utility games with and without differences of bargaining power among the members of the coalition. Cooperation in intertemporal games is examined, and conditions that permit the reduction of these games to games in coalition function form are outlined. Biform games and games that combine non-cooperative search and matching of coalition members with cooperative solutions, i.e. efficient contracts within the coalition, are considered.

Computational Economics Oscar Afonso, Paulo B. Vasconcelos, 2015-08-27 Computational Economics A concise introduction is a comprehensive textbook designed to help students move from the traditional and comparative static analysis of economic models to a modern and dynamic computational study The ability to equate an economic problem to formulate it into a mathematical model and to solve it

computationally is becoming a crucial and distinctive competence for most economists This vital textbook is organized around static and dynamic models covering both macro and microeconomic topics exploring the numerical techniques required to solve those models A key aim of the book is to enable students to develop the ability to modify the models themselves so that using the MATLAB Octave codes provided on the book and on the website students can demonstrate a complete understanding of computational methods This textbook is innovative easy to read and highly focused providing students of economics with the skills needed to understand the essentials of using numerical methods to solve economic problems It also provides more technical readers with an easy way to cope with economics through modelling and simulation Later in the book more elaborate economic models and advanced numerical methods are introduced which will prove valuable to those in more advanced study This book is ideal for all students of economics mathematics computer science and engineering taking classes on Computational or Numerical Economics Study Guide for Use with Macroeconomics [by] J.

Bradford DeLong Martha L. Olney, J. Bradford De Long, 2002 **Sustainable Macroeconomics, Climate Risks and Energy Transitions** Unurjargal Nyambuu, Willi Semmler, 2023-05-30 Given the industrialized world's historical dependence on fossil fuel based energy resources and the now realized perils of moving beyond the earth's carbon budget this book explores the myriad challenges of climate change and in reaching a low carbon economy Reconciling the medium term competing yet frequently complementary needs for transition policies the book provides guidelines for complex and often conflicting climate policy tasks The book presents empirical trends in the use of carbon emitting resources and evaluates market driven short termism and its adverse impact on resource use and the environment it emphasizes a medium term macroeconomic perspective for the transition The authors attempt a paradigm shift towards a framework of sustainable macroeconomics They survey relevant historical models conduct empirical and numerical analyses of the climate change relevant dynamic models provide empirical illustrations and evaluate diverse policy options and implementations together with their historical evolution New analytical issues are also considered e.g. strategic behavior in the energy and resource sectors energy competition and the dynamics of market shares in new energy technology and supporting policies for dealing with the tipping points encountered in climate change The authors suggest a multitude of market based strategies and public fiscal monetary and financial policies and longer run planning for resource extraction all suitable for driving sustainable growth and a transformation of the energy sector The book also examines the multiple delaying forces slowing the transition to a low carbon economy these typically arise from short termism lock ins irreversibility leakages non cooperative games and other political strategies Thus they explain the snail's pace evolution of current national and global climate policies The book will appeal to scholars and students of economics and environmental science It is also relevant for policymakers and practitioners in multilateral institutions research institutions as well as governments and ministries of countries interested in alternative energy sources climate economists and those who study the implementation of sustainable and low carbon based

policies **Theory of Macroeconomic Policy** Christopher Tsoukis, 2020-10-22 Theory of Macroeconomic Policy reviews the theoretical foundations of macroeconomic fiscal and monetary policy. It offers a panoramic view of macroeconomic theory covering a wide range of topics that are not customarily dealt with in macroeconomics texts as well as more standard material. Advanced theory is bridged with more elementary or intermediate material and established models are reviewed alongside current research directions. There is an extensive review of empirical evidence on virtually every topic supplemented by narrative accounts for various episodes. The policy implications of the various theories are emphasised throughout. The chapters are largely self-contained so that different courses can focus at different places. A Guidance for Further Study Section and extensive bibliography give plenty of ideas for all levels of independent study from Undergraduate Projects to MSc Dissertations to PhD Theses. Theory of Macroeconomic Policy presents a balance between breadth as well as depth, analytical treatment and intuition, theory and evidence, vintage theories and current directions, theory and policy, established theory and debate. Theory of Macroeconomic Policy is an affirmation that there is a well-developed body of theory that is invaluable for an in-depth understanding of the macro economy and policy; equally, there is much scope for critical discussion and debate.

On the Relationship Between Determinate and MSV Solutions in Linear RE Models
Bennett T. McCallum, 2004 This paper considers the possibility that in linear rational expectations RE models all determinate uniquely non-explosive solutions coincide with the minimum state variable MSV solution which is unique by construction. In univariate specifications of the form $y_t = A y_{t-1} + C u_t$ that result holds if a RE solution is unique and non-explosive then it is the same as the MSV solution. Also this result holds for multivariate versions if the A and C matrices commute and a certain regularity condition holds. More generally, however, there are models of this form that possess unique non-explosive solutions that differ from their MSV solutions. Examples are provided and a strategy for easily constructing others is outlined.

Rational Expectations and Inflation Thomas J. Sargent, 2013-05-05 A fully expanded edition of the Nobel Prize winning economist's classic book. This collection of essays uses the lens of rational expectations theory to examine how governments anticipate and plan for inflation and provides insight into the pioneering research for which Thomas Sargent was awarded the 2011 Nobel Prize in economics. Rational expectations theory is based on the simple premise that people will use all the information available to them in making economic decisions; yet applying the theory to macroeconomics and econometrics is technically demanding. Here Sargent engages with practical problems in economics in a less formal, non-econometric way, demonstrating how rational expectations can satisfactorily interpret a range of historical and contemporary events. He focuses on periods of actual or threatened depreciation in the value of a nation's currency. Drawing on historical attempts to counter inflation from the French Revolution and the aftermath of World War I to the economic policies of Margaret Thatcher and Ronald Reagan, Sargent finds that there is no purely monetary cure for inflation; rather, monetary and fiscal policies must be coordinated. This fully expanded edition of *Rational Expectations and Inflation* includes Sargent's 2011 Nobel lecture.

United States Then Europe Now It also features new articles on the macroeconomics of the French Revolution and government budget deficits

Economics of Rivalry, Conflict and Cooperation Partha Gangopadhyay, 2011 Presents a study of the dynamics of rivalry evolution of costly and violent conflicts and potential cooperation among powerful players This work is suitable for those interested in some of the pressing problems of the global system such as intra national and interethnic conflicts climate change challenges poverty and terrorism

Macroeconomic Theory Volker Böhm, 2017-10-30 This textbook offers a unique approach to macroeconomic theory built on microeconomic foundations of monetary macroeconomics within a unified framework of an intertemporal general equilibrium model extended to a sequential and dynamic analysis It investigates the implications of expectations and of stationary fiscal policies on allocations on the quantity of money and on the dynamic evolution of the economy with and without noise The text contrasts and compares the two main competing approaches in macroeconomics within the same intertemporal model of a closed monetary economy the one postulating full price flexibility to guarantee equilibrium in all markets at all times under perfect foresight or rational expectations versus the so called disequilibrium approach where trading occurs at non market clearing prices and wages when these adjust sluggishly from period to period in response to market disequilibrium signals

Current Issues in Monetary Economics Helmut Wagner, 2012-12-06 Helmut Wagner University of Hagen Feithstr 140 D 58084 Hagen In the last few years decisive methodological and thematic focal points which are important for practical economic policy have been developed in the theory of monetary and exchange rate policy This book is concerned with these developments their assessment and the open questions which have still not been solved It is divided into four parts The first part deals with central bank design the second with strategies of monetary policies and their implementation Part III is concerned with theoretical aspects of exchange rate policy and monetary union and part IV with selected issues of monetary and exchange rate policy in developing and transition countries In the following pages I will provide an 1 overview of the individual articles With the exception of the article by Nobel Laureate James Tobin the contributions contained in this book were all introduced and discussed at an academic symposium I organized in Castrop Rauxel on 8 and 9 September 1997 James Tobin agreed spontaneously to my suggestion that he should write a comprehensive article especially for this publication A short summary of the comments or supplementary papers and of the general discussions will be given in the last section of this book titled Conclusion and Supplements There I will also provide some supplements respecting the issues which were the subject of the greatest amount of debate at the symposium

The Economics of Public Debt Kenneth J. Arrow, Michael J. Boskin, 1988-09-19 A collection of essays presenting new insights into the analysis of public debt theory recent historical episodes econometric analyses and policy dilemmas and options It also documents the perceptions of debt problems from viewpoints of national economies as well as the world economy

Modern Macroeconomics Brian Snowdon, Howard R. Vane, 2005 Erudite accessible and lucidly written this book is both a stimulating introduction and excellent guide to the

controversies and diversity of modern macroeconomic debates It will prove invaluable for students on undergraduate and postgraduate courses who want to understand as well as simply learn about macroeconomics

Dynamic Games and Applications in Economics Tamer Bařar, 2012-12-06 This volume contains eleven articles which deal with different aspects of dynamic and differential game theory and its applications in economic modeling and decision making All but one of these were presented as invited papers in special sessions I organized at the 7th Annual Conference on Economic Dynamics and Control in London England during the period June 26 28 1985 The first article which comprises Chapter 1 provides a general introduction to the topic of dynamic and differential game theory discusses various noncooperative equilibrium solution concepts including Nash Stackelberg and Consistent Conjectural Variations equilibria and a number of issues such as feedback and time consistency The second chapter deals with the role of information in Nash equilibria and the role of leadership in Stackelberg problems A special type of a Stackelberg problem is the one in which one dominant player leader acquires dynamic information involving the actions of the others followers and constructs policies so called incentives which enforce a certain type of behavior on the followers Chapter 3 deals with such a class of problems and presents some new theoretical results on the existence of affine incentive policies The topic of Chapter 4 is the computation of equilibria in discounted stochastic dynamic games Here for problems with finite state and decision spaces existing algorithms are reviewed with a comparative study of their speeds of convergence and a new algorithm for the computation of nonzero sum game equilibria is presented

Development Economics Shahrukh Rafi Khan, 2019-10-23 Following the 2007 2009 financial and economic crises there has been an unprecedented demand among economics students for an alternative approach which offers a historical institutional and multidisciplinary treatment of the discipline Economic development lends itself ideally to meet this demand yet most undergraduate textbooks do not reflect this This book will fill this gap presenting all the core material needed to teach development economics in a one semester course while also addressing the need for a new economics and offering flexibility to instructors Rather than taking the typical approach of organizing by topic the book uses theories and debates to guide its structure This will allow students to see different perspectives on key development questions and therefore to understand more fully the contested nature of many key areas of development economics The book can be used as a standalone textbook on development economics or to accompany a more traditional text
