The text presents ways in which biostatistics can effectively describe and assess problems e.g. COVID 19 that threaten physical, mental, and social wellbeing. Data collection, analysis, presentation, and interpretation are covered in detail and supported with ample relevant examples and exercises incorporated throughout the book. Practical questions follow each problem to encourage students to consider why the problem likely exists, help formulate hypotheses, and then statistically assess those hypotheses. Abundant examples and assignment problems, many involving COVID 19, within each chapter cover a variety of application areas of biostatistics. Rationale boxes offer explanations of why certain methods are used for specific cases. Well designed, attractive graphics that help make statistics easier to comprehend are used to present concepts, functions, and data. Applied focus encourages students to use computer applications e.g. SAS, MS Excel to demonstrate data analysis. Data analysis systems are used to obtain descriptive measures and basic plots e.g. stem and leaf and box plots for the purposes of exploratory data analysis. P values in hypothesis testing and confidence intervals in descriptive and analytic assessment are discussed and included on many of the computer printouts.
