Maus Sandra Göbbels, 2002-01-01 **OECD Guidelines for the Testing of Chemicals, Section 2 Test No. 249: Fish Cell Line Acute Toxicity - The RTgill-W1 cell line assay** OECD, 2021-06-18 The RTgill W1 cell line assay describes a 24 well plate format fish cell line acute toxicity test using the permanent cell line from rainbow trout *Oncorhynchus mykiss* gill RTgill W1 After 24 h of exposure to the test chemical cell viability is assessed based on three fluorescent cell viability indicator dyes measured on the same set of cells Resazurin enters the cells in its non fluorescent form and is converted to the fluorescent product resorufin by mitochondrial microsomal or cytoplasmic oxidoreductases **Functional Analysis of the Lymphatic Vessel Hyaluronan Receptor-1 (LYVE-1) in Tumor Growth and Progression** Christa Hahmann, 2007-09-13

Die Bedeutung des G-Proteins G[alpha]12 [G-Alpha12] für die Entwicklung von kardialer Hypertrophie und Insuffizienz und für das Schaltverhalten einzelner L-Typ-Calciumkanäle in Kardiomyozyten von Mäusen mit kardialer Überexpression des [beta]2-Adrenozeptors [Beta2-Adrenozeptors] Katharina Förster, 2004 **Protein Structure Analysis** Roza Maria Kamp, Theodora Choli-Papadopoulou, Brigitte Wittmann-Liebold, 2012-12-06 Protein Structure Analysis Preparation and Characterization is a compilation of practical approaches to the structural analysis of proteins and peptides Here about 20 authors describe and comment on techniques for sensitive protein purification and analysis These methods are used worldwide in biochemical and biotechnical research currently being carried out in pharmaceutical and biomedical laboratories or protein sequencing facilities The chapters have been written by scientists with extensive experience in these fields and the practical parts are well documented so that the reader should be able to easily reproduce the described techniques The methods compiled in this book were demonstrated in student courses and in the EMBO Practical Course on Microsequence Analysis of Proteins held in Berlin September 10-15 1995 The topics also derived from a FEBS Workshop held in Halkidiki Thessaloniki Greece in April 1995 Most of the authors participated in these courses as lecturers and tutors and made these courses extremely lively and successful Since polypeptides greatly vary depending on their specific structure and function strategies for their structural analysis must for the most part be adapted to each individual protein Therefore advantages and limitations of the experimental approaches are discussed here critically so that the reader becomes familiar with problems that might be encountered **Advanced Methods in Protein Microsequence Analysis** Brigitte Wittmann-Liebold, Johann Salnikow, 2012-12-06 Much of the recent spectacular progress in the biological sciences can be attributed to the ability to isolate analyze and structurally characterize proteins and peptides which are present in cells and cellular organelles in only very small amounts Recent advances in protein chemistry and in particular the application of new micromethods have led to fruitful advances in the understanding of basic cellular

processes Areas where protein chemical studies have resulted in interesting discoveries include the peptide hormones and their release factors growth factors and oncogenes bioenergetics proton pumps and ion pumps and channels topogenesis and protein secretion molecular virology and immunology membrane protein analysis and receptor research In fact the key methods are now on hand to unravel many of the major outstanding problems of molecular biology and in particular questions of fundamental interest which relate to developmental biology and specificity in cell cell interaction In this volume we have assembled descriptions of procedures which have recently been shown to be efficacious for the isolation purification and chemical characterization of proteins and peptides that are only available in minute amounts Emphasis is placed on well established micromethods which have been tested and found useful in many laboratories by experienced investigators The chapters are written by specialists and describe a range of sensitive techniques which can be used by researchers working in laboratories with only modest resources and equipment
