Handbook Of Cane Sugar Engineering By E Hugot:

Handbook of Cane Sugar Engineering Emile Hugot, 1986 Hugot's Handbook of Cane Sugar Engineering needs little introduction it can be found in technical libraries in cane sugar producing countries all over the world Unique in the extent and thoroughness of its coverage the book has for many years provided the only complete description of cane sugar manufacture mills diffusers boilers and other factory machinery calculation methods of capacity for every piece of equipment and process and manufacturing techniques This new edition has been extensively revised Information that has become obsolete or of little interest has been deleted or severely shortened Detailed additions have been made to chapters dealing with recently developed equipment An entirely new chapter has been added on automation and data processing Numerous figures graphs drawings photographs tables and formulae are provided The metric system has been used throughout the book but because many factories still use the British units all measures formulae and tables and nearly all calculations have been given in both systems *Handbook of Cane Sugar Engineering* E. Hugot, 2014-05-12 Handbook of Cane Sugar Engineering focuses on the technologies equipment methodologies and processes involved in cane sugar engineering The handbook first underscores the delivery unloading and handling of cane cane carrier and knives and tramp iron separators The text then examines crushers shredders combinations of cane preparators and feeding of mills and conveying bagasse The manuscript takes a look at roller grooving pressures in milling mill speeds and capacity and mill settings Topics include setting of feed and delivery openings and trash plate factors influencing capacity formula for capacity fiber loading tonnage records linear speed and speed of rotation sequence of speeds hydraulic pressure and types of roller grooving The book then elaborates on electric and turbine mill drives mill gearing construction of mills extraction milling control purification of juice filtration evaporation sugar boiling and centrifugal separation The handbook is a valuable source of data for engineers involved in sugar cane engineering **Handbook of Cane Sugar Engineering** Emile Hugot, 1972 **Handbook of Sugar Refining** Chung Chi Chou, 2000-08-14 This book provides a reference work on the design and operation of cane sugar manufacturing facilities It covers cane sugar decolorization filtration evaporation and crystallization centrifugation drying and packaging **Introduction to Cane Sugar Technology** G. H. Jenkins, 2013-09-03 Introduction to Cane Sugar Technology provides a concise introduction to sugar technology more specifically cane sugar technology up to the production of raw sugar Being intended originally for use in a post graduate university course the book assumes a knowledge of elementary chemical engineering as well as adequate knowledge of chemistry In the field of sugar manufacture itself the object of the book is to place more emphasis on aspects which are not adequately covered elsewhere In accordance with this objective attention has been concentrated mainly on processes and operation of the factory and description of equipment is made as brief as possible with numerous references to other books where more detail is available The emphasis on operation rather than equipment has also been prompted by observation of quite a few factories in different countries where good

equipment is giving less than its proper performance due to inefficient operation and supervision The book is confined to the raw sugar process which has been the author's main interest Refining is discussed only to the extent required to explain refiners requirements concerning quality of raw sugar **Standard Fabrication Practices for Cane Sugar Mills** E. Delden, 2015-07-14 Sugar Series Vol 1 Standard Fabrication Practices for Cane Sugar Mills focuses on the processes methodologies and principles involved in standard fabrication practices for cane sugar mills The publication first tackles the storage and transportation of cane separation of juice from cane use and behavior of bagasse and juice weighing or measuring The book then elaborates on liming clarification carbonatation and sulfitation processes and special clarification agents and their history Topics include phosphate magnesium compounds clay bauxite charcoal and carbon blankit lime kiln sulfur dioxide and sample calculation of a sulfur burner The text examines ion exchange evaporation evaporator cleaning measurement of heat transfer coefficient boiling house operation seeding and crystallization molasses centrifugation and crystallizers Discussions focus on water circulation powdered sugar preparation crystallization procedure in practice soda and acid facilities cleaning shut down and variations on chemical cleaning The manuscript is a vital source of data for researchers wanting to study the standard fabrication practices for cane sugar mills **Cane Sugar Manufacture in India** D. P. Kulkarni, 1996 Zucker und Zuckerwaren Hartmut Hoffmann, Werner Mauch, Werner Untze, 2002-01-01 Eine detaillierte Beschreibung der Eigenschaften und Weiterverarbeitung des Rohstoffes Saccharose finden Sie in dem Werk Zucker und Zuckerwaren **Cane Sugar Handbook** James C. P. Chen, Chung Chi Chou, 1993-12-16 In print for over a century it is the definitive guide to cane sugar processing treatment and analysis This edition expands coverage of new developments during the past decade specialty sugars plant maintenance automation computer control systems and the latest in instrumental analysis for the sugar industry **Riegel's Handbook of Industrial Chemistry** James A. Kent, 2012-12-06 The aim of this book is to present in a single volume an up to date account of the chemistry and chemical engineering which underlie the major areas of the chemical process industry This most recent edition includes several new chapters which comprise important threads in the industry's total fabric These new chapters cover waste minimization safety considerations in chemical plant design and operation emergency response planning and statistical applications in quality control and experimental planning Together with the chapters on chemical industry economics and wastewater treatment they provide a unifying base on which the reader can most effectively apply the information provided in the chapters which describe the various areas of the chemical process industries The ninth edition of this established reference work contains the contributions of some fifty experts from industry government and academe I have been humbled by the breadth and depth of their knowledge and expertise and by the willingness and enthusiasm with which they shared their knowledge and insights They have without exception been unstinting in their efforts to make their respective chapters as complete and informative as possible within the space available Errors of omission duplication and shortcomings in organization are mine

Grateful acknowledgment is made to the editors of technical journals and publishing houses for permission to reproduce illustrations and other materials and to the many industrial concerns which contributed drawings and photographs

Taschenbuch für Lebensmittelchemiker und -technologen Dieter Osteroth, 2013-03-07 Cogeneration in the

Cane Sugar Industry J.H. Payne, 2012-12-02 The cane plant is probably the most efficient utilizer of sun energy for food production and at the same time provides an equivalent quantity of biomass The purpose of this book is to set down the unique position of sugar cane in the cogeneration field Simultaneous with the development of distance transmission of electricity sugar cane processors started cogeneration making use of the cane plant to supply the power for its own processing and in recent years excess power for export A broad view of cogeneration in the cane industry covering the energy available in a crop the technology of processing for optimum recovery of energy as well as sugar is presented here The book describes the most practicable processes for recovering energy in the form of process steam and electricity Cogeneration in the Cane Sugar Industry should be of interest to a broad spectrum including government agencies biomass interests power generators public utilities as well as sugar producers and technologist Modern Energy Economy in Beet Sugar Factories K. Urbaniec, 2013-10-22 This book is devoted to the problems of identifying the potential for designing and implementing energy saving measures in beet sugar factories As the sugar industries in various countries differ considerably with respect to the economic conditions for factory operation and the level of technological development the problem range is very broad It may include the elimination of faulty or unreliable auxiliary equipment or the introduction of simple improvements in vapour distribution schemes in factories operated in countries where the need for efficient energy utilization has not really been very urgent until now On the other hand there are sugar factories in some other countries where considerable achievements have been made in energy saving but where further progress may still be possible if more advanced engineering problems are solved The author takes an interdisciplinary approach to its subject aimed at demonstrating how the energy demand of a sugar factory can be affected by the interactions between a number of factors namely layout and parameters of the energy conversion and distribution processes layout and parameters of the sugar manufacturing process and by processes characteristics of the equipment and control systems completeness and accuracy of the energy monitoring systems The book consists essentially of three parts In Chapters 1 to 3 some theoretical background is given and engineering principles for creating efficient energy conversion and utilization subsystems in sugar factories are reviewed The second part Chapters 4 to 7 discusses recent developments in these areas and their importance to energy conversion and utilization in sugar factories The presentation is illustrated with suitable practically oriented examples based mostly on the author's experience gained from nine years working with an engineering company specializing in the design erection and modernization of sugar factories as well as five years of consulting and research for the sugar industry Short examples are presented in Chapters 1 2 3 and 7 while in the third part of the book Chapters 8 and 9 summaries are given of real life design analyses of energy subsystems of sugar factories characterized by different levels of sophistication of the energy economy The book thus provides a systematic review which will be helpful to managers and technologists in sugar factories where the problem may arise of choosing the most appropriate set of measures that best fit the factory's unique

needs It can also be used in university level courses on the energy economy of sugar factories and will be of interest to design engineers and specialists engaged in research in the area
