Soil Atlas of Asia Food and Agriculture Organization of the United Nations, EC/JRC, 2023-07-12. The European Commission's Joint Research Centre and FAO's Global Soil Partnership collaborated with experts from across Asia and other regions to produce the first ever Soil Atlas of Asia. The aim of the Atlas is to raise awareness about the significance of soil to life in Asia among a wide range of audiences, including the general public, decision makers, politicians, teachers, and scientists from other disciplines. The Atlas comprises a series of annotated maps that demonstrate the diversity of soil characteristics across Asia in an easy-to-understand manner. It also explains how soils are formed, the key factors that shape soil characteristics, and why these vary across the continent. Moreover, the Atlas emphasizes the role of soils in shaping our daily lives and highlights the growing pressures on soils resulting from urban expansion, inappropriate land management, pollution, increased demand for food, and climate change. The Atlas encourages people to understand how their actions can help protect and restore soils while reducing degradation processes.

Gravity Field, Seismicity and Tectonics of the Indian Peninsula and the Himalayas R.K. Verma, 2012-12-06. Recent developments in Science and Technology have removed the boundaries between the so-called fundamental and applied fields of research. This has been particularly evident in the rapidly expanding geophysical sciences with their far-reaching applications. Fundamental geophysical studies of surface, subsurface, and crustal structures where gravity investigations play an important role are of immediate potential importance in defining major structural features or geological units which may control or influence the

development of metallogenic provinces petroleum potential areas or coal fields Gravity studies in India have a long history and tradition The earliest gravity measurements were made with two brass pendulums loaned by the Royal Society of England when Basevi and Heaviside established 30 gravity pendulum stations between Cape Comorin and Ladakh during 1865 to 1873 Over the subsequent years large areas of the country have been systematically covered through gravimeters and a number of regional and detailed studies have been undertaken by various agencies like Survey of India Geological Survey of India GSI Oil and Natural Gas Commission ONGC National Geophysical Research Institute NGRI and a number of universities Assistance was provided by late Prof G P Woollard and his former students Muckenfuss Bonini Shankaranarayan and Murali Manghnani who have connected India to the international gravity net work Gravity studies carried out by the Survey of India have been of great value in geodetic studies
