Alford, 2025-05-28 This book offers a comprehensive exploration of craft theory in relation to contemporary architecture Craft is an old and familiar idea but the line between craft and art or craft and mere manufacturing for example is notoriously hard to describe In architecture a similarly blurred line between the design process on one hand and the physical making of buildings on the other lies at the center of various debates about what it means to do architecture The growth and development of craft theory in recent years suggest new insights into these architectural debates but situating the meaning of craft within architecture within today's technological landscape is a complex problem Alford responds to this challenge by collecting various narratives from craft theory and other fields and discerning among them new lenses through which to view contemporary architectural practice Episodes from this expanded view of craft in architecture go beyond predictable accounts of Ruskin and Morris to envision new models of practice new ways of engaging other building professionals and new ways for architects to understand their own labor and the nature of how and what kinds of things they themselves craft Architecture is changing and within the ongoing story of craft explored in this book are new and surprising ways to

understand design and construct the built environment Written for students and scholars this book challenges and extends the legacy of craft thinking in architecture      **The Maze of Ingenuity, second edition** Arnold Pacey, 1992-01-23 From cathedrals to star wars Arnold Pacey looks at the interaction of technologies and society over the last thousand years and uses that survey to argue for a more humane form of future technological development The second edition of The Maze of Ingenuity concentrates on Europe and North America and incorporates recent insights from the history and sociology of technology A new series of chapters extends Pacey s discussion of the role of ideas and ideals in technology in the period since the industrial revolution Contents The Cathedral Builders European Technical Achievement between 1100 and 1280 A Century of Invention 1250 1350 Mathematics and the Arts 1450 1600 The Practical Arts and the Scientific Revolution Social Ideals in Technical Change German Miners and English Puritans 1450 1650 The State and Technical Progress 1660 1770 Technology in the Industrial Revolution Conflicting Ideals in Engineering America and Britain 1790 1870 Institutionalizing Technical Ideals 1820 1920 Idealistic Trends in Twentieth Century Technology
