Cyberkriminologie

Thomas-Gabriel Rüdiger, Petra Saskia Bayerl, 2020-03-31 Können bisherige kriminologische Theorien und Erkenntnisse auf die Regeln des digitalen Raumes übertragen werden? Dieses Buch vereint Beiträge von Autoren aus verschiedenen Bereichen der Kriminologie und anderen Kriminalwissenschaften, die dieser wichtigen Frage aus unterschiedlichen Perspektiven nachgehen. Damit zeichnet dieses Buch aktuelle Entwicklungen im Bereich digitaler Delikte und digitaler Polizeiarbeit nach und untersucht, inwiefern kriminologische Phänomene und Ansätze im digitalen Raum neu begriffen und gestaltet werden müssen im Sinne einer eigenen Cyberkriminologie. Encyclopedia of Victimology and Crime Prevention Bonnie S. Fisher, Steven P. Lab, 2010-02-02

Victimology and crime prevention are growing interrelated areas cutting across several disciplines. Victimology examines victims of all sorts of criminal activity from domestic abuse to street violence to victims in the workplace who lose jobs and pensions due to malfeasance by corporate executives. Crime prevention is an important companion to victimology because it offers insight and techniques to prevent situations that lead to crime and attempts to offer ideas and means for mitigating or minimizing the potential for victimization. In many ways the two fields have developed along parallel yet separate paths and the literature on both has been scattered across disciplines as varied as sociology, law and criminology, public health and medicine, political science and public policy, economics, psychology and human services and more. The Encyclopedia of Victimology and Crime Prevention provides a comprehensive reference work bringing together such dispersed knowledge as it outlines and discusses the status of victims within the criminal justice system and topics of deterring and preventing victimization in the first place and responding to victims' needs. Two volumes containing approximately 375 signed entries provide users with the most authoritative and comprehensive reference resource available on victimology and crime prevention both in terms of breadth and depth of coverage. In addition to standard entries leading scholars in the field have contributed Anchor Essays that in broad strokes provide starting points for investigating the more salient victimology and crime prevention topics. A representative sampling of general topic areas covered includes interpersonal and domestic violence, child maltreatment and elder abuse, street violence, hate crimes and terrorism, treatment of victims by the media, courts, police and politicians, community response to crime victims, physical design for crime prevention, victims of nonviolent crimes, deterrence and prevention, helping and counseling crime victims, international and comparative perspectives and more. **Mapping and Analysing Crime Data** Alex Hirschfield, Kate Bowers, 2003-09-02

One of the key methods of reducing and dealing with criminal activity is to accurately gauge and then analyse the geographical distribution of crime from small scale to large scale areas. Once the police and government know what areas suffer most from criminal activity they can assess why this is the case and then deal with it in the most effective way. Crime mapping and the spatial analysis of crime data have become recognised as powerful tools for the study and control of crime. Much of the emerging demand for more information and detailed crime pattern analysis have been driven by legislative changes such as

the UK's new Crime and Disorder Act which has placed a joint statutory duty on Police Forces and Local Authorities to produce crime and disorder audits for their areas. The book sets out methods used in the fields of Geographical Information Systems and highlights areas of best practice. It examines the types of problems to which spatial crime analysis can be applied, reviews the capabilities and limitations of existing techniques and explores the future directions of spatial crime analysis and the need for training. It centres on a series of case studies highlighting the experiences of academics and practitioners in agencies centrally involved in the partnership approach to crime prevention. Practitioners and academics not only in the UK but also worldwide should be interested in the book as an up-to-date information resource and a practical guide.

Crime Prediction Using GIS and Statistical Modelling Priyanka Biswas, Nilanjana Das Chatterjee, 2025-02-17. The study presented in this SpringerBrief uses GIS tools to analyze incidents of violence against women in West Bengal, India, identifying hotspots and offering tools and strategies to predict and prevent future violence. The aim of this study is to understand the existing scenarios and the complex crime patterns committed against women in West Bengal using advanced GIS tools to map and understand the underlying socio-economic and physical environmental contexts of specific crime events and critically discuss emerging criminogenic issues on the basis of theoretical understanding and immediate situations. This study evaluates the effectiveness of existing legislative measures to extract the gaps that exist between policy formulation and execution and effectively applied statistical methods and GIS technologies to visualize the future potential crime areas so that possible measures might be taken. The study considers four categories of violence perpetrated on women: human trafficking, acid attacks, rape, and sexual harassment. Each chapter follows a self-contained design to address the study objectives as each crime follows a distinct crime pattern, differentially affects the targets, and increases the risk of victimization and differential key factors are responsible for specific crime occurrences.

Security Technologies and Social Implications Garik Markarian, Ruza Karlovic, Holger Nitsch, Krishna Chandramouli, 2022-10-04. SECURITY TECHNOLOGIES AND SOCIAL IMPLICATIONS explains how the latest technologies can advance policing and security, identify threats, and defend citizens from crime and terrorism. Security Technologies and Social Implications focuses on the development and application of new technologies that police and homeland security officers can leverage as a tool for both predictive and intelligence-led investigations. The book recommends the best practices for incorporation of these technologies into day-to-day activities by law enforcement agencies and counterterrorism units. Practically, it addresses legal, technological, and organizational challenges, e.g., resource limitation and privacy concerns, combined with challenges related to the adoption of innovative technologies. In contrast to classic tools, modern policing and security requires the development and implementation of new technologies using AI, machine learning, social media tracking, drones, robots, GIS, computer vision, and more.
