Solved Problems in Classical Electromagnetism J. Pierrus, 2018-08-02 Classical electromagnetism one of the fundamental pillars of physics is an important topic for all types of physicists from the theoretical to the applied The subject is widely recognized to be one of the most challenging areas of the physics curriculum both for students to learn and for lecturers to teach Although textbooks on electromagnetism are plentiful hardly any are written in the question and answer style format adopted in this book It contains nearly 300 worked questions and solutions in classical electromagnetism and is based on material usually encountered during the course of a standard university physics degree Topics covered include some of the background mathematical techniques electrostatics magnetostatics elementary circuit theory electrodynamics electromagnetic waves and electromagnetic radiation For the most part the book deals with the microscopic theory although we also introduce the important subject of macroscopic electromagnetism as well Nearly all questions end with a series of comments whose purpose is to stimulate inductive reasoning and reach various important conclusions arising from the problem Occasionally points of historical interest are also mentioned Both analytical and numerical techniques are used in obtaining and analyzing solutions All computer calculations are performed with Mathematica^{CO} and the relevant code is provided in a notebook either in the solution or the comments

Carving Nature at Its Joints Joseph Keim Campbell, Michael O'Rourke, Matthew H. Slater, 2011-10-28 Reflections on the metaphysics and epistemology of classification from a distinguished group of philosophers Contemporary discussions of the success of science often invoke an ancient metaphor from Plato's Phaedrus successful theories should carve nature at its joints But is nature really jointed Are there natural kinds of things around which our theories cut The essays in this volume offer reflections by a distinguished group of philosophers on a series of intertwined issues in the metaphysics and epistemology of classification The contributors consider such topics as the relevance of natural kinds in inductive inference the role of natural kinds in natural laws the nature of fundamental properties the naturalness of boundaries the metaphysics and epistemology of biological kinds and the relevance of biological kinds to certain questions in ethics Carving Nature at Its Joints offers both breadth and thematic unity providing a sampling of state of the art work in contemporary analytic philosophy that will be of interest to a wide audience of scholars and students concerned with classification
