Review Of Sesame Value Chain In Ethiopia liste

Wassie, Solomon

Review Of Sesame Value Chain In Ethiopia Iiste:

Scoping study on Ethiopian sesame value chain Kassie, Girma T., Worku, Yonas, Bachewe, Fantu Nisrane, Asnake, Woinishet, Abate, Gashaw Tadesse, 2023-01-31 The Consultative Group for International Agricultural Research CGIAR is the largest non profit public agricultural research group globally Recently it has restructured itself into One CGIAR with the intention of integrating its capabilities knowledge assets people and global presence for a new era of interconnected and partnership driven research towards achieving the Sustainable Development Goals SDGs One CGIAR led the development of about 30 initiatives that aimed at addressing one more of the key impact areas of SDGs One of these initiatives is Rethinking Food Markets and Value Chains for Inclusion and Sustainability referred to as rethinking markets in short Rethinking Markets Initiative aims to provide evidence on what types of bundled innovations incentive structures and policies are most effective for creating more equitable sharing of income and employment opportunities in growing food markets while reducing the food sector's environmental footprint The initiative has four work packages addressing different but interrelated issues and that are being implemented in one or more countries Work Package 1 WP1 is about making globally integrated value chains inclusive efficient and environmentally sustainable *Digital finance and agri-food value chains: Case studies from Ethiopia* Wassie, Solomon, 2025-07-09 Agriculture is of paramount importance to Ethiopia's economy Agriculture accounts for 40 percent of the country's GDP 80 percent of export earnings and employs 75 percent of the population Tamene Barrett et al 2022 **National Green Export Review of Ethiopia** ,2018 Post-harvest losses in rural-urban value chains: Evidence from Ethiopia Minten, Bart, Tamru, Seneshaw, Reardon, Thomas, 2019-09-12 We study post harvest losses PHL in important and rapidly growing rural urban value chains in Ethiopia We analyze self reported PHL from different value chain agents farmers wholesale traders processors and retailers based on unique large scale data sets for two major commercial commodities the storable staple teff and the perishable liquid milk PHL in the most prevalent value chain pathways for teff and milk amount to between 2.2 and 3.3 percent and 2.1 and 4.3 percent of total produced quantities respectively We complement these findings with primary data from urban food retailers for more than 4 000 commodities Estimates of PHL from this research overall are found to be significantly lower than is commonly assumed We further find that the emerging modern retail sector in Ethiopia is characterized by half the level of PHL than are observed in the traditional retail sector This is likely due to more stringent quality requirements at procurement sales of more packaged and therefore better protected commodities and better refrigeration storage and sales facilities The further expected expansion of modern retail in these settings should likely lead to a lowering of PHL in food value chains at least at the retail level

Technical Efficiency of Sesame Production Abel Manaye, 2017-07-20 Master's Thesis from the year 2016 in the subject Business economics Supply Production Logistics course Agricultural Economics language English abstract This study aimed to analyze the technical efficiency of sesame production in Humera area and to identify major factors that cause efficiency

differentials of smallholder farmers The objective of the study is to measure the technical efficiency of small holder farmers in sesame production The study was conducted using a cross sectional data collected in 2015 2016 production year from a total sample of 110 households Cobb Douglas function was employed to estimate technical efficiency of smallholder farmers in sesame production The finding of the study indicated that there is inefficiency in the production of sesame in the study area The estimation of the frontier model with inefficiency variables shows that the mean technical efficiency of farmers is 0.6969% This implies that production of sesame can be increased by 31 percent given the existing technological level This indicates that the farmers did not using production inputs efficiently in such a way that they give their maximum potential The estimated stochastic production frontier model together with the inefficiency parameters suggests that any attempt to strengthen technical efficiency of smallholder farmers in the study area must give due attention to the improvement of the principal causes for efficiency differentials such as education age extension contact credit availability off farm activities and proximity which were found to be significant determinants of efficiency level The negative coefficient of educational status age credit availability extension contact and off farm activities means these factors are important in determining the existing efficiency of farmers positively and significantly While the positive coefficients of proximity indicate that the increments in these factors increase inefficiency Given the limited resources in the study area will enable the concerned parties engaged in efforts for improvement of the product and productivity of this part of the community to bring about the desired changes in a cost effective way than trying to inject an investment on the production of sesame

Value Chain Analysis of Groundnut

TIZAZU AMBAW,2020-02-06 Academic Paper from the year 2019 in the subject Agrarian Studies grade Good Bahir Dar University College of Agriculture and Environmental Science course Agricultural economics language English abstract This study was aimed at analyzing value chain of Groundnut in Pawi Woreda Metekel Zone Beni shangul Gumuz Region with specific objectives of identifying groundnut value chain and examining the performance of actors in the chain analyzing the determinants of groundnut supply to the market in the study area and identifying and map marketing channels The data were collected from both primary and secondary sources The primary data for this study were collected from 155 farmers 30 traders and 25 consumers through using questionnaires Descriptive statistics and Econometrics models were used to analyze the collected data Results show that the main groundnut value chain actors in the study area groundnut producers farmer input suppliers local assembler wholesalers retailers Processers and consumers It is also found out that groundnut passes through several intermediaries with little value being added before reaching the end users The chain is governed by wholesalers and Processers who have capital advantage over the other chain actors Therefore farmers are forced to capture a lower share of profit margin The result of OLS regression model indicated that marketable supply is significantly affected by sex of household head age of household head agricultural extension service ownership of transport facility distance of the nearest market and quantity of groundnut produced Therefore policy aiming at increasing farmers access to modern inputs

developing and improving infrastructure gender consideration and improving extension system are recommended to accelerate the chain s development

Identifying Priority Value-chains in Ethiopia Rui S. Benfica,2019 This paper uses an economy wide model to identify agricultural activities and value chains in Ethiopia whose expansion would be most effective at generating economic growth reducing national and rural poverty creating jobs and diversifying diets Results indicate that expanding cereals production would continue to contribute positively to national pro poor growth However the analysis suggests that there is no single value chain that can achieve all policy objectives Instead a more balanced portfolio of valuechains would not only enhance agriculture s future contribution to poverty reduction and economic growth but also promote faster rural transformation and dietary diversification both of which are needed to create job opportunities and improve nutrition outcomes over the longer term After considering alternative weighting schemes for competing policy goals the final analysis suggests that vegetables and fruits tree crops should be considered priority value chains because these are among the most effective at achieving multiple policy objectives Other highly ranked value chains include oilseeds tobacco cotton tea and milk dairy
