*Emerging Technologies in Manufacturing* Matthew N. O. Sadiku, Abayomi J. Ajayi-Majebi, Philip O. Adebo, 2023-03-15 The manufacturing industry is a cornerstone of national economy and people's livelihood. It is the way of transforming resources into products or goods which are required to cater to the needs of the society. Traditional manufacturing companies currently face several challenges such as rapid technological changes, inventory problem, shortened innovation, short product life cycles, volatile demand, low prices, highly customized products, and ability to compete in the global markets. Modern manufacturing is highly competitive due to globalization and fast changes in the global market. This book reviews emerging technologies in manufacturing. These technologies include artificial intelligence, smart manufacturing, lean manufacturing, robotics, automation, 3D printing, nanotechnology, industrial Internet of things, and augmented reality. The use of these technologies will have a profound impact on the manufacturing industry. The book consists of 19 chapters. Each chapter addresses a single emerging technology in depth and describes how manufacturing organizations are adopting the technology. The book fills an important niche for manufacturing. It is a comprehensive jargon-free introductory text on the issues, ideas, theories, and problems on emerging technologies in manufacturing. It is a must-read book for beginners or anyone who wants to be updated about emerging technologies.

**Simulating and Generating Motions of Human Figures** Katsu Yamane, 2004-01-15 This book focuses on two issues related to human figures: realtime dynamics computation and interactive motion generation. In spite of the growing interest in human figures as both physical robots and virtual characters, standard algorithms and tools for their kinematics and dynamics computation have not been investigated very much. *Simulating and Generating Motions of Human Figures* presents original algorithms to simulate, analyze, generate, and control motions of human figures, all focusing on realtime and interactive computation. The book provides both practical methods for contact collision simulation, essential for the simulation of humanoid robots and virtual characters, and a general framework for online interactive motion generation of human figures based on the dynamics simulation algorithms.
