Cloud Computing. Strategies for Improving the Performance and Security Parashu Ram Pal, Priyanka Ora, 2019-11-18 Doctoral Thesis Dissertation from the year 2019 in the subject Computer Science Internet New Technologies language English abstract Continuous advancement in software field and widespread use of software products many innovative applications have emerged cloud computing is one of them In cloud computing users need not to install software they just log in the cloud and pay for their required service As many users are frequently using cloud computing a big question arises here is the security of user's personal data present at cloud Therefore we need to safeguard the data in the midst of untrusted processes On keeping these issues in mind a security model is designed in this thesis The whole model is divided into three sections one is data encryption second is secure data storage and the third one is maintenance of data integrity In first section before uploading the file on cloud file is encrypted by RSA Partial Homomorphic algorithm Two keys public and private are generated after encryption Between these two keys public key is known to all but private key is known to only authorize users In second section the data owner uploads the encrypted file moreover with this one access permission

list containing names of authorized user and their respective permission In this model two access permissions Read Only and Read and Write are defined by the data owner In third section the cloud provider calculates hash value of uploaded file using MD5 hash algorithm This hash value is transferred back to the data owner to use it for verification purpose As Owner performs verification hash value of the desired data present at cloud is again calculated Now this new hash value matches with old hash value which is present at owner end If it matches no modification is performed if hash value does not match then some modifications has been performed on the uploaded data After uploading the file on cloud this file is visible to all users They can easily download the file but cannot decrypt it as all users don t have private key Private key is sent to authenticate users by e mail so that they can get original data Data modification is controlled by the owner as cloud stores data in encrypted form The whole architecture is compared with combination of Triple DES and SHA The results generated by proposed model have shown that it takes less encryption and decryption time as compare to 3DES and SHA combination Therefore the proposed model provides better security and maintains data integrity of the uploaded data on cloud

Business Process Management Andreas Gadatsch,2023-05-27 This textbook bridges the gap between business management and organisational methods and their digital implementation because process management increasingly means designing operational tasks In addition to methodological basics the work offers many practical examples and exercises Prof Gadatsch s book is now considered the current classic THE authoritative standard work on IT supported design of business processes The tenth edition has been revised and adapted to the requirements of the digital transformation Process management has evolved greatly due to the trend of digitalisation and as a result of the pandemic Another related trend is the increased use of Data Science methods for process management which has been consequently named Process Science at scientific conferences Recent research results published under the heading of Explorative Process Management are also of particular importance They show that the first main phase of process management was rather focused on optimising existing processes and business models New practical examples were included at various points in the book for example the migration strategies for the ERP system SAP S 4 HANA which is the basis for many industrial and service processes The chapter on modelling processes was updated and newer methods such as Business Model Canvas were included
