Contingent Computation M. Beatrice Fazi, 2018-11-15 In Contingent Computation M Beatrice Fazi offers a new theoretical perspective through which we can engage philosophically with computing The book proves that aesthetics is a viable mode of investigating contemporary computational systems It does so by advancing an original conception of computational aesthetics that does not just concern art made by or with computers but rather the modes of being and becoming of computational processes Contingent Computation mobilises the philosophies of Gilles Deleuze and Alfred North Whitehead in order to address aesthetics as an ontological study of the generative potential of reality Through a novel philosophical reading of G del s incompleteness theorems and of Turing s notion of incomputability Fazi finds this potential at the formal heart of computational systems and argues that computation is a process of determining indeterminacy This indeterminacy which is central to computational systems does not contradict their functionality Instead it drives their very operation albeit in a manner that might not always fit with the instrumental representational and cognitivist purposes that we have assigned to computing Introduction to Data Structures and Algorithm Analysis with Pascal Thomas L.

Mathematical Reviews ,1974 **Thought , Dissertation Abstracts International** ,1975 Notices of the American Mathematical Society American Mathematical Society,1978 *Threshold Concepts within the Disciplines* ,2008-01-01 Threshold Concepts within the Disciplines brings together leading writers from various disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education The foundational principle of threshold concepts is that there are in each discipline conceptual gateways or portals that must be negotiated to arrive at important new understandings In crossing the portal transformation occurs both in knowledge and subjectivity Such transformation involves troublesome knowledge a key concern for contributors to this book who identify threshold concepts in their own fields and suggest how to deal with them Part One extends and enhances the threshold

concept framework containing chapters that articulate its qualities its links to other social theories of learning and other traditions in educational research Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing engineering biology design modern languages education and economics In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts Other chapters emphasise the equally important being and becoming dimension of learning Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers The book will be of interest to disciplinary teachers educational researchers and educational developers It also is of relevance to issues in quality assurance and professional accreditation
