ABSTRACT: Gravity in five-dimensional braneworld backgrounds often exhibits problematic features, including kinetic ghosts, strong coupling, and the vDVZ discontinuity. These problems are an obstacle to producing and analyzing braneworld models with interesting and potentially observable modifications of 4d gravity. We examine these problems in a general AdS_5/AdS_4 setup with two branes and localized curvature from arbitrary brane kinetic terms. We use the interval approach and an explicit “straight” gauge-fixing. We compute the complete quadratic gauge-fixed effective 4d action, as well as the leading cubic order corrections. We compute the exact Green’s function for gravity as seen on the brane. In the full parameter space, we exhibit the regions which avoid kinetic ghosts and tachyons. We give a general formula for the strong coupling scale, *i.e.* the energy scale at which the linearized treatment of gravity breaks down, for relevant regions of the parameter space. We show how the vDVZ discontinuity can be naturally but nontrivially avoided by ultralight graviton modes. We present a direct comparison of warping versus localized curvature in terms of their effects on graviton mode couplings. We exhibit the first example of DGP-like crossover behavior in a general warped setup.

Philip D. Mannheim

Gravity In Braneworld Rironkon:

Brane-localized Gravity Philip D. Mannheim, 2005 This timely and valuable book provides a detailed pedagogical introduction and treatment of the brane localized gravity program of Randall and Sundrum in which gravitational signals are able to localize around our four dimensional world in the event that it is a brane embedded in an infinitely sized higher dimensional anti de Sitter bulk space A completely self contained development of the material needed for brane world studies is provided for both students and workers in the field with a significant amount of the material being previously unpublished Particular attention is given to issues not ordinarily treated in the brane world literature such as the completeness of tensor gravitational fluctuation modes the causality of brane world propagators and the status of the massless graviton fluctuation mode in brane worlds in which it is not normalizable
