

Men are 80% of the organization (80/100)

Men are .8 of the organization

The ratio of men to women is 4:1

Men are 4/5ths of the organization

Concerning financial statements absolute values are often difficult to grasp and remember. Amounts on financial statements in many cases are more meaningful when compared with other amounts. For example, if the number of men in an organization is 4,092 and the women are 1,023, it would be easier to say that men are 80% of the organization (4,092/5,115) or that they out number the women 4 to 1. In some cases ratios make predictions possible. Some ratios tend to remain constant from year to year. If variable expenses have averaged 80% of sales and if we predict sales will be \$1,000,000 next year, then we are able to say that we expect variable expenses to be \$800,000.

Our objective now will be to define and discuss some of the more important ratios.

**Current ratio** - The current ratio is:

$$\text{Current ratio} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

This ratio is almost always of critical importance. It provides an indicator of the ability to pay short-term debt. In accounting, the difference between current assets and current liabilities is called working capital. If current liabilities exceed current assets, then at that moment in time the company is not able to pay in full its current debts. Inadequate working capital has been cited as one of the major reasons businesses fail. That the ratio should be greater than 1 is universally agreed upon. But how much greater than 1 remains the question. A general rule of thumb is that the ratio should be at least 2:1. However, differences in industries and management decision-making may require a considerably different standard ratio.

It is possible to approach the current ratio from two different viewpoints:

1. A banker's viewpoint
2. A management viewpoint

From a banker's viewpoint the higher the ratio the better the ratio. A high ratio indicates a high degree of liquidity and a better ability to repay short term debt.

From a management point of view, the real issue is not the ratio itself but the factors that create the ratio. Accountants tend to define working capital as current assets less current liabilities. From a management's viewpoint, the questions are: (1) What are the decisions that directly affect current assets and (2) what are the decisions that affect current liabilities?

Concerning current assets, the major elements are cash, accounts receivable, and inventory. The decisions that affect current assets most directly were discussed
