Teacher Development for Content-Based Language Education Susan Ballinger, Ruth Fielding, Diane J. Tedick, 2024-09-10 This book fills a large gap in our understanding of how to prepare teachers for the challenging but increasingly popular task of integrating content and language instruction. It brings together findings on content-based teacher education from Africa, Asia, Australia, Europe, and North America in order to inform researchers and teacher educators and enable them to play a critical role in the continued success of such programs. It offers a solid grounding in theories and applications of content-based approaches with empirical studies investigating teacher identity, materials design, use of cognitive discourse functions, and best practices for teacher education. Responding to the growing popularity of content-based programs and the shortage of qualified teachers for these contexts, this book promotes teacher-researcher collaboration and provides support for trainee teachers, in-service teachers, and course leaders.

Handbook of Educational Data Mining Cristobal Romero, Sebastian Ventura, Mykola Pechenizkiy, Ryan S.J.d. Baker, 2010-10-25 This handbook provides a thorough overview of the current state of knowledge in this area. The first part of the book includes nine surveys and tutorials on the principal data mining techniques that have been applied in education. The second part presents a set of 25 case studies that give a rich overview of the problems that EDM has addressed. With contributions by well-known researchers from a variety of fields, the book reflects the multidisciplinary nature of the EDM community. It helps education experts understand what types of questions EDM can address and helps data miners understand what types of questions are important to educational design and educational decision making.

Improvement Science as a Tool for School Enhancement Susan P. Carlile, Deborah S. Peterson, 2022-02-16 A 2023 SPE Outstanding Book Honorable Mention. *Improvement Science as a Tool for School Enhancement: Solutions for Better Educational Outcomes* is a collection of equity-focused improvement science in action school-based case studies led by practitioners. Chapter authors tell us how and why improvement science principles make system-wide improvements in classroom practice, how they learned from the problems encountered, and further how they were then able to make changes within a school or district. A core principle of improvement science is variability in context: what works for whom and under what conditions, a critical concept for improvement in each of the case studies. Each team analyzed their problem of practice from the perspective of the unique conditions in their context, considering what might work and what might not work, and when the changes could be expanded for implementation school- or district-wide. Early chapters describe the actions of school personnel to embed social and emotional learning as well as how to serve historically underserved students during disasters. Trauma-informed and restorative practices embraced by all staff enhanced student outcomes and reduced educational disparities in classrooms and throughout the school. The content then explores how improvement science change processes improve chronic absenteeism and discipline issues through whole-school practices related to school climate, centering student and family perception, developing representative systems, and facilitating
