DRM, a Design Research Methodology Lucienne T.M. Blessing, Amaresh Chakrabarti, 2009-06-13 The initial motivator for the development of DRM a Design Research Methodology and the subsequent writing of this book was our frustration about the lack of a common terminology benchmarked research methods and above all a common research methodology in design A shared view of the goals and framework for doing design research was missing Design is a multidisciplinary activity occurring in multiple application areas and involving multiple stakeholders As a consequence design research emerges in a variety of disciplines for a variety of applications with a variety of subjects This makes it particularly difficult to review its literature relate various pieces of work find common ground and validate and share results that are so essential for sustained progress in a research community Above all design research needs to be successful not only in an academic sense but also in a practical sense How could we help the community develop knowledge that is both academically and practically worthwhile Each of us had our individual ideas of how this situation could be improved Lucienne Blessing while finishing her thesis that involved studying and improving the design process developed valuable insights about the importance and relationship of empirical studies in developing and evaluating these

improvements Amaresh Chakrabarti while finishing his thesis on developing and evaluating computational tools for improving products had developed valuable insights about integrating and improving the processes of building and evaluating tools
