ABSTRACT

The aim of present investigation was formulation and development of Ticagrelor Sustained Release Matrix Tablets. Study started from the preformulation study of the drug. Drug having good solubility in both dissolution mediums. The flow of API is low so directly compressible excipient used for tablet preparation. While studying IR spectrum, we can conclude that there is no interaction between drug and other excipients. Initially feasibility trials were taken using HPMC K4M and K100M. Tablets were found acceptable in physical parameters evaluation. During drug release evaluation amount of HPMC K4M increases the drug release for long period of time. In contrast less amount of HPMC K100M helps in drug release. So role of polymer concentration is very important in this formulation. Based on that F3 batch found satisfactory and considering for further factorial screening. 3^2 factorial design applied by taking HPMC K4M and PVP K-30 as independent factors. Factorial batch T1-T9 prepared by using direct compression method. Physical and chemical evaluation was done for all batches. PVP K-30 and HPMC K4M significantly impact on Drug release and hence the model found significant. Finally the optimized batch P12 taken based on Contour plot and evaluation done. Batch T12 load for stability for 1 month and found stable. Hence the batch T12 was optimized batch.

is available at <http://www.ScholarlyEditions.com> Bioformulations: for Sustainable Agriculture Naveen Kumar Arora, Samina Mehnaz, Raffaella Balestrini, 2016-06-06 More than a century has passed since the first bioformulations were introduced to the market. But there is still much to be done, explored and developed. Though bioformulations offer green alternatives and are important for sustainable agriculture, they make up only a small fraction of the total additions used to enhance crop yields or protect them from pests. There is a great need to develop bioformulations that can promote confidence among end users; accordingly, it is imperative that bioformulations to replace chemicals be reliable and overcome the shortcomings of the past. Bioformulations for Sustainable Agriculture discusses all the issues related to the current limitations and future development of bioformulations. It examines in detail those bioformulations that include biofertilizers and biopesticides, also commonly known as bioinoculants, presenting a global picture of their development. Further chapters address diverse microbes that are already being or could be used as bioformulations. The book also discusses the techniques, tools, and other additions required to establish bioformulations as trustworthy and global solutions. It assesses the types of bioformulations currently available on the market while also considering the future roles of bioformulations, including the reclamation of marginal and polluted soils. Further, it discusses the current legislation and much-needed amendments. Overall, the book provides a comprehensive outlook on the status quo of bioformulations and the future approaches needed to improve them and achieve sustainable agriculture and food security without sacrificing the quality of soils. This will be extremely important in offering chemical-free foods and a better future for generations to come.

Sustainable Livelihood Approach Stephen Morse, Nora McNamara, 2013-02-13 We all view the ubiquitous term sustainability as a worthwhile goal. But how can we apply the principles of sustainability in the real world at the sharp end of communities in developing nations where income insecurity is the troubled norm? This volume provides some practical answers, explaining the precepts of the sustainable livelihood approach (SLA) through the case study of a microfinance scheme in Africa. The case study centered around the work of the Catholic Church's Diocesan Development Services organization involved an SLA implemented over two years designed in part to help enhance its existing microfinance operation through closer links between local communities and international donors. The book's central conclusion is that we must move beyond the concept of sustainable livelihood itself with its in-built polarities between developed and developing nations and embrace a more global notion of sustainable lifestyle, a more nuanced and inclusive approach that encompasses not just how we make a sustainable living but how we can live sustainable lives.

Biostimulants in Agriculture II: Towards a Sustainable Future Maurizio Ruzzi, Giuseppe Colla, Youssef Rouphael, 2024-06-11 Modern agriculture needs to review and broaden its practices and business models by integrating opportunities coming from different adjacent sectors and value chains, including the bio-based industry in a fully circular economy strategy. Searching for new tools and technologies to increase crop productivity under optimal and sub-optimal conditions and to improve resource use efficiency is crucial to ensure food security while preserving soil quality, microbial

biodiversity and providing business opportunities for farmers Biostimulants based on microorganisms or organic substances obtained from renewable materials represent a sustainable efficient technology or complement to synthetic counterparts to improve nutrient use efficiency and secure crop yield stability Under the new European Union Regulation 2019 1009 plant biostimulants were defined based on four agricultural functional claims as follows Plant biostimulants are products that stimulate plant nutrition processes independently of the product s nutrient content with the sole aim of improving one or more of the following characteristics of the plant and or the plant rhizosphere 1 nutrient use efficiency 2 tolerance resistance to a biotic stress 3 quality characteristics or 4 availability of confined nutrients in the soil or rhizosphere Many diverse natural substances and chemical derivatives of natural or synthetic compounds as well as beneficial microorganisms are cataloged as plant biostimulants including i humic substances ii plant or animal based protein hydrolysates iii macro and micro algal extracts iv silicon v arbuscular mycorrhizal fungi AMF and vi plant growth promoting rhizobacteria PGPR belonging to the Azotobacter Azospirillum and Rhizobium genera

Empirical Evaluation of Renewable Energy Projects for Sustainable Development Tony Kealy, 2024-08-22 This book critically analyses renewable energy sources of electrical power energy utilised to save money on the amount of electrical energy imported from the national electricity grid and help nations meet binding environmental goals The main renewable energy sources analysed are wind turbine generators hydroelectric plant and solar PV systems The book presents a robust evaluation framework that can be used in the renewable energy analysis process One of the main findings is the identification of short term variations associated mainly with wind turbine electrical generator power output signals These short term variations are negating the potential advantages of installing wind turbine electrical generators One of the suggested methods to counteract the short term variations is the use of energy storage Without utility sized energy storage binding energy targets will be very difficult to achieve The three main realms of sustainable development namely environmental economic and human realms are discussed throughout the book The three realms are closely interlinked so a weakness identified in any one realm affects the overall sustainability of the business country any organisation development process
