development of new technologies being driven by these new wide requirements This new approach is in contrast with a narrowly technological one in which individual tasks like programming are aided by machines but in which the production process as a whole is not supported The main body of the book is divided into four Parts Part I gives a short overview of the ESF project and its ideas and goes on to attempt to place the ESF work in the context of industry as a whole with reference to both producers and users of Information Technology systems Part II sets out to explain the technological basis of the Software Factory as seen by ESF and goes on to describe some experimental and pioneering implementations of Factory Support Environments and their constituents Part III is devoted to the most complete implementation of an ESF Factory Support Environment to date Kernel 2r This Section provides a highly detailed discussion of both design and implementation issues In Part IV addresses what deployment strategies are now available to continue the spread of these ideas in order to meet the goal of better software based systems i e systems which are safer more economical to build more easily changed and more useful than those that have been built up to now Finally a Glossary of Terms and a list of References is given Readers those who have a professional interest in Information Technology
