

# Amoeba Sisters Video Recap of Meiosis

1. The purpose of meiosis is to make gametes, also known as sperm and egg cells. In humans, your body cells have 46 chromosomes. How many chromosomes are in a sperm or egg cell if, when they come together to form a fertilized zygote, there are 46 chromosomes? Write the correct number of chromosomes next to the sperm and egg.

2. Interphase must occur once before meiosis can happen. (Same thing for mitosis). What would happen if interphase didn't occur first?  
**The cell would not grow.**

**INTERPHASE TO DO LIST**

- ☒ Growth
- ☒ DNA Replication
- ☒ General cell processes

3. A cell that begins meiosis has 23 chromosomes inherited from the mother (shown in green in the cartoon below) and 23 chromosomes inherited from the father (shown in blue in the cartoon below). In the process of meiosis, chromosomes begin to match up in homologous pairs. How would you know if two chromosomes were homologous?

**They would be very similar in shape and size.**

4. Crossing over is a very important event in Prophase I of meiosis! What happens during crossing over and what is the significance?

**Segments of chromosomes are exchanged, this is significant because this creates variation of traits in parent genes.**

5. Meiosis does PMAT twice! That means there is a prophase I and a prophase II. There is a metaphase I and a metaphase II. Etc... If the cartoon below has chromosomes in the middle of the cell, how would you know whether it was in metaphase I or metaphase II?

**In metaphase I chromosomes are lined up with homologous pairs and with metaphase 2 chromosomes are lined up in the middle of the cell.**

6. Meiosis does not always occur without any difficulties. Describe what occurs during nondisjunction and the effect on the resulting cells.

**Chromosomes might not separate correctly and this can cause genetic recombination.**
