Solving Optimization Problems with MATLAB® Dingyü Xue, 2020-04-06 This book focuses on solving optimization problems with MATLAB Descriptions and solutions of nonlinear equations of any form are studied first Focuses are made on the solutions of various types of optimization problems including unconstrained and constrained optimizations mixed integer multiobjective and dynamic programming problems Comparative studies and conclusions on intelligent global solvers are also provided

Order Analysis, Deep Learning, and Connections to Optimization Johannes Jahn, 2024-10-22 This book introduces readers to order analysis and various aspects of deep learning and describes important connections to optimization such as nonlinear optimization as well as vector and set optimization Besides a review of the essentials this book consists of two main parts The first main part focuses on the introduction of order analysis as an application driven theory which allows to treat order structures with an analytical approach Applications of order analysis to nonlinear optimization as well as vector and set optimization with fixed and variable order structures are discussed in detail This means there are close ties to finance operations research and multicriteria decision making Deep learning is the subject of the second main part of this book In addition to the usual basics the focus is on gradient methods which are investigated in the context of complex models with a large number of parameters And a new fast variant of a gradient method is presented in this part Finally the deep learning approach is extended to data sets given by set valued data Although this set valued approach is more computationally intensive it has the advantage of producing more robust predictions This book is primarily intended for researchers in the fields of optimization order theory or artificial intelligence AI but it will also benefit graduate students with a general interest in these fields The book assumes that readers have a basic understanding of functional analysis or at least basic analysis By unifying and streamlining existing approaches this work will also appeal to professionals seeking a comprehensive and straightforward perspective on AI or order theory approaches

Statistical Foundations of Actuarial Learning and its Applications Mario V. Wüthrich, Michael Merz, 2022-11-22 This open access book discusses the statistical modeling of insurance problems a process which comprises data collection data analysis and statistical model building to forecast insured events that may happen in the future It presents the mathematical foundations behind these fundamental statistical concepts and how they can be applied in daily actuarial practice Statistical modeling has a wide range of applications and depending on the application the theoretical aspects may be weighted differently here the main focus is on prediction rather than explanation Starting with a presentation of state of the art actuarial models such as generalized linear models the book

then dives into modern machine learning tools such as neural networks and text recognition to improve predictive modeling with complex features Providing practitioners with detailed guidance on how to apply machine learning methods to real world data sets and how to interpret the results without losing sight of the mathematical assumptions on which these methods are based the book can serve as a modern basis for an actuarial education syllabus **Advances in Linear Matrix Inequality Methods in Control** Laurent El Ghaoui,Silviu-Iulian Niculescu,2000-01-01 Linear matrix inequalities LMIs have recently emerged as useful tools for solving a number of control problems This book provides an up to date account of the LMI method and covers topics such as recent LMI algorithms analysis and synthesis issues nonconvex problems and applications It also emphasizes applications of the method to areas other than control Linear Matrix Inequalities in System and Control Theory Stephen Boyd,Laurent El Ghaoui,Eric Feron,Venkataramanan Balakrishnan,1994-01-01 In this book the authors reduce a wide variety of problems arising in system and control theory to a handful of convex and quasiconvex optimization problems that involve linear matrix inequalities These optimization problems can be solved using recently developed numerical algorithms that not only are polynomial time but also work very well in practice the reduction therefore can be considered a solution to the original problems This book opens up an important new research area in which convex optimization is combined with system and control theory resulting in the solution of a large number of previously unsolved problems **Matrix Inequalities** Xingzhi Zhan,2002-07-09 The main purpose of this monograph is to report on recent developments in the field of matrix inequalities with emphasis on useful techniques and ingenious ideas Among other results this book contains the affirmative solutions of eight conjectures Many theorems unify or sharpen previous inequalities The author s aim is to streamline the ideas in the literature The book can be read by research workers graduate students and advanced undergraduates **Linear Matrix Inequalities in Control** ,2006 **Special Section on Linear Matrix Inequalities** Herbert Werner,2003 **Matrix Inequalities for Iterative Systems** Hanjo Taubig,2017-02-03 The book reviews inequalities for weighted entry sums of matrix powers Applications range from mathematics and CS to pure sciences It unifies and generalizes several results for products and powers of sesquilinear forms derived from powers of Hermitian positive semidefinite as well as nonnegative matrices It shows that some inequalities are valid only in specific cases How to translate the Hermitian matrix results into results for alternating powers of general rectangular matrices Inequalities that compare the powers of the row and column sums to the row and column sums of the matrix powers are refined for nonnegative matrices Lastly eigenvalue bounds and derive results for iterated kernels are improved *A Survey of Matrix Theory and Matrix Inequalities* Marvin Marcus,Henryk Minc,1992-01-01 Concise masterly survey of a substantial part of modern matrix theory introduces broad range of ideas involving both matrix theory and matrix inequalities Also convexity and matrices localization of characteristic roots proofs of classical theorems and results in contemporary research literature more Undergraduate level 1969 edition Bibliography *Dilations, Linear Matrix Inequalities, the Matrix Cube Problem and*

Beta Distributions J. William Helton, Igor Klep, Scott McCullough, Markus Schweighofer, 2019-02-21 An operator C on a Hilbert space H dilates to an operator T on a Hilbert space K if there is an isometry $V: H \rightarrow K$ such that $C = V^*TV$. A main result of this paper is for a positive integer d the simultaneous dilation up to a sharp factor d expressed as a ratio of functions for d even of all $d \times d$ symmetric matrices of operator norm at most one to a collection of commuting self adjoint contraction operators on a Hilbert space
