Measurement Invariance Rens Van De Schoot, Peter Schmidt, Alain De Beuckelaer, 2015-10-05 Multi item surveys are frequently used to study scores on latent factors like human values attitudes and behavior Such studies often include a comparison between specific groups of individuals either at one or multiple points in time If such latent factor means are to be meaningfully compared the measurement structures including the latent factor and their survey items should be stable across groups and or over time that is invariant Recent developments in statistics have provided new analytical tools for assessing measurement invariance MI The aim of this special issue is to provide a forum for a discussion of MI covering some crucial themes 1 ways to assess and deal with measurement non invariance 2 Bayesian and IRT methods employing the concept of approximate measurement invariance and 3 new or adjusted approaches for testing MI to fit increasingly complex statistical models and specific characteristics of survey data The special issue started with a kick off meeting where all potential contributors shared ideas on potential papers This expert workshop was organized at Utrecht University in The Netherlands and was funded by the Netherlands Organization for Scientific Research NWO VENI 451 11 008 After the kick off meeting the authors submitted their papers all of which were reviewed by experts in the field The papers in the eBook are listed in alphabetical order but in the editorial the papers are introduced thematically Although it is impossible to cover all areas of relevant research in the field of MI papers in this eBook provide insight on important aspects of measurement invariance We hope that the discussions included in this special issue will stimulate further research on MI and facilitate further discussions to support the understanding of the role of MI in multi item surveys

Emotions and Leadership in Organizations

and Educational Institutes Osman Titrek, Anna Stavicka, Ana Campina, Gozde Sezen-Gultekin, Carlos Francisco De Sousa Reis, 2023-11-28 Emotion management is an important source of social capital and synergy for organizations. Managers have a great role in the creation of this synergy. A manager who can cope with their emotions indirectly contributes to organizational effectiveness. This situation is especially important in human-oriented organizations providing services rather than goods such as educational institutions. Leadership is a process of social influence which maximizes the efforts of others towards the achievement of a goal. Leadership stems from social influence rather than authority or power. In terms of system approach, the input-output process and feedback of educational organizations are always related to human behaviors. Therefore, organizations must address the nature of human beings in all of their managerial processes. Although organizations in which people are at the foreground try to continue their functioning on a rational and formal basis throughout the managerial process, they sometimes have to manage emotional and informal phenomena. In this case, there is a need for managers and school leaders who can shape the rationale in line with the requirements of human nature. What is expected from this administrator is that they do not ignore human needs and emotions while providing the management of educational institutions. For this reason, these managers should be leaders rather than executives who only work in a formal framework of organization management. Moreover, principals and teachers should also be leaders in all educational processes. Emotions are the main catalyst of positive organizational culture. Leaders can create an effective organizational culture with the main source of positive emotions between employers. Positive emotions also motivate employees for organizational purposes. If a leader wishes to create and maintain an effective organizational culture, it is essential to support positive behavior and emotional climate in their institutes and schools. Leaders, school managers, and teachers therefore need to develop emotion management abilities. Educational organizations need to shape their organizational culture, climate, and psychology to support their leaders in efficiently managing their employees' emotions. Up to now, this topic has been usually addressed as the main catalyst and a sub-dimension of emotional intelligence. Moreover, current evidence classifies social and empathy skills as other sub-dimensions of emotional intelligence. For this reason, this collection of peer-reviewed articles will draw attention to the contemporary term emotional management and contribute to educational fields by means of exploring the relationship between emotions and leadership.

Research in Education, 1966 Managerial, Occupational and Organizational Stress Research 0 Manchester School of Managements, 2024-11-01 This title was first published in 2001. A discussion of managerial, occupational, and organizational stress research. The volume is in seven parts. The first part explores the theoretical or conceptual frameworks in occupational and organizational stress that have developed out of empirical work and work with others in different countries. The second part provides the reader with reviews of literature on different topics in the field of workplace stress. Part Three highlights a range of studies undertaken by UMIST and their collaborating colleagues in

different institutions The research that highlights issues and problems of current relevance is found in the fourth part while the methodological studies involving instrument development refining of existing measures and more is found in Part Five The studies linking stress and health follows on from this and the new area of investigation evaluating stress management interventions concludes this survey of research in this field
