**Research Methods in Digital Food Studies** Jonatan Leer, Stinne Gunder Strøm Krogager, 2021-05-30 This book offers the first methodological synthesis of digital food studies. It brings together contributions from leading scholars in food and media studies and explores research methods from textual analysis to digital ethnography and action research. In recent times, digital media has transformed our relationship with food, which has become one of the central topics in digital and social media. This spatiotemporal shift in food cultures has led us to reimagine how we engage in different practices related to food as consumers. The book examines the opportunities and challenges that the new digital era of food studies presents and what methodologies are employed to study the changed dynamics in this field. These methodologies provide insights into how restaurant reviews, celebrity webpages, the blogosphere and YouTube are explored as well as how to analyse digital archives, digital soundscapes and digital food activism and a series of approaches to digital ethnography in food studies. The book presents straightforward ideas and suggestions for how to get started on one's own research in the field through well-structured chapters that include several pedagogical features. Written in an accessible style, the book will serve as a vital point of reference for both experienced

Users & Machine Learning-based Curation Systems  
Hendrik Heuer,2020-09-03 Users are increasingly interacting with machine learning ML based curation systems YouTube and Facebook two of the most visited websites worldwide utilize such systems to curate content for billions of users

Contemporary challenges such as fake news filter bubbles and biased predictions make the understanding of ML based curation systems an important and timely concern Despite their political social and cultural importance practitioners framing of machine learning and users understanding of ML based curation systems have not been investigated systematically This is problematic since machine learning as a novel programming paradigm in which a mapping between input and output is inferred from data poses a variety of open research questions regarding users understanding The first part of this thesis provides the first in depth investigation of ML based curation systems as socio technical systems The second part of the thesis contributes recommendations on how ML based curation systems can and should be explained and audited The first part analyses practitioners framing of ML by examining how the term machine learning ML applications and ML algorithms are framed in tutorials The thesis also investigates the beliefs that users have about YouTube and introduces a user belief framework of ML based curation systems Furthermore it demonstrates how limited users capabilities for providing input data for ML based curation systems are The second part evaluates different explanations of ML based systems This evaluation uncovered an explanatory gap between what is available to explain ML based curation systems and what users need to understand such systems Informed by this explanatory gap the second part of this thesis demonstrates that audits of ML systems can be an important alternative to explanations This demonstration of audits also uncovers a popularity bias enacted by YouTube s ML based curation system Based on these findings the thesis recommends performing audits to ensure that ML based systems act in the public s interest
