Exploring meteorite mysteries a teacher's guide with activities for earth and space sciences. , The Age of Analogy Devin Griffiths, 2016-10-28 How did literature shape nineteenth-century science? Erasmus Darwin and his grandson Charles were the two most important evolutionary theorists of eighteenth and nineteenth-century Britain. Although their ideas and methods differed, both Darwins were prolific and inventive writers. Erasmus composed several epic poems and scientific treatises, while Charles is renowned both for his collected journals now titled *The Voyage of the Beagle* and for his masterpiece *The Origin of Species*. In *The Age*

of Analogy Devin Griffiths argues that the Darwins writing style was profoundly influenced by the poets novelists and historians of their era The Darwins like other scientists of the time labored to refashion contemporary literary models into a new mode of narrative analysis that could address the contingent world disclosed by contemporary natural science By employing vivid language and experimenting with a variety of different genres these writers gave rise to a new relational study of antiquity or comparative historicism that emerged outside of traditional histories It flourished instead in literary forms like the realist novel and the elegy as well as in natural histories that explored the continuity between past and present forms of life Nurtured by imaginative cross disciplinary descriptions of the past from the historical fiction of Sir Walter Scott and George Eliot to the poetry of Alfred Tennyson this novel understanding of history fashioned new theories of natural transformation encouraged a fresh investment in social history and explained our intuition that environment shapes daily life Drawing on a wide range of archival evidence and contemporary models of scientific and literary networks The Age of Analogy explores the critical role analogies play within historical and scientific thinking Griffiths also presents readers with a new theory of analogy that emphasizes language s power to foster insight into nature and human society The first comparative treatment of the Darwins theories of history and their profound contribution to the study of both natural and human systems this book will fascinate students and scholars of nineteenth century British literature and the history of science

Current Approaches to Metaphor Analysis in Discourse Ignasi Navarro i Ferrando, 2019-09-02 This volume takes up the challenge of surveying the present state of a variety of approaches to the identification analysis and interpretation of metaphor across communication channels situational contexts genres and social spheres It reflects three foremost trends of present metaphor research namely the communicative approach the cognitive modelling approach and the multimodality approach These trends are considered as areas of research emerging on the ground of the Conceptual Metaphor Theory initiated by Lakoff The book intends to show their concomitances as well as mark their diversifying paths The aim is to bring about and make apparent the many connections among assumingly different trends stemming from CMT Whereas discrepancies between communicative and conceptual perspectives might seem irredeemable the book emphasizes and claims that the background framework of CMT provides a solid foundation for collaboration and mutual influence Consequently the analysis of metaphor usage in context may provide insights for cognitive modelling proposals The analysis

of cognitive configuration of conceptual domains may in turn illuminate our understanding of communicative decisions in discourse The integration of multimodal metaphor analysis puts forward the idea that diverse modal manifestations of metaphor reveal the symbiosis between communicative and cognitive stances The various subject areas and methodologies illuminate the scene of current research in the field The poignant contributions open far reaching avenues into the realm of human thought and discourse
