The title of your homework should be: [Tutorial group]_[Surname]_[Student number]. Example: Micro-economics-G1_Romagnoli_1234567.

Exercise 1: True or False:

1. Since $U_1(x) = x$ and $U_2(x) = \sqrt{x}$ are monotonic transformations, they represent the same preferences over lotteries under uncertainty.

Answer: False. Under risk and uncertainty, the preference is defined over lotteries (a combination of probability and monetary outcomes). The utility function reflects only the preference over monetary outcomes.

2. Suppose Anne and Bob's utility functions are given by $U_A(W) = 1 - e^{-0.2W}$ and $U_B(W) = \sqrt{W}$, respectively. Anne has a constant absolute risk aversion while Bob has a constant relative risk aversion.

Answer: True. Just show by computing Arrow-Prat measures $r(\cdot)$ and $rr(\cdot)$.

3. If Richard has a utility function $U(W) = W^{1.5}$, he will pay a positive premium to insure himself against income risks.

Answer: False. Only risk averse agents are willing to insure against risk by paying a positive premium. Richard is risk seeking and therefore never pays for insurance. Instead, he would be willing to "pay for risk".

Exercise 2: The Arrow-Pratt (A-P) index of risk aversion

There are two individuals, Adam and Bob, whose utility functions are given by $U_A(x)$ and $U_B(x)$, respectively (both are twice continuously differentiable everywhere). It is known that if Adam is more risk averse than Bob, then Adam's utility function must be more concave than Bob's. Namely, there exists a concave function $f(\cdot)$ such that $U_A(x) = f(U_B(x))$.¹ Let Adam and Bob's P-A

¹To be more precise, we have $f'(y) \geq 0$ and $f''(y) \leq 0$ for all y .

Nikiforos T. Laopodis,2020-06-03 This revised and fully expanded edition of Understanding Investments continues to

incorporate the elements of traditional textbooks on investments but goes further in that the material is presented from an intuitive practical point of view and the supplementary material included in each chapter lends itself to both class discussion and further reading by students. It provides the essential tools to navigate complex global financial markets and instruments including relevant and classic academic research and market perspectives. The author has developed a number of key innovative features. One unique feature is its economic angle whereby each chapter includes a section dedicated to the economic analysis of that chapter's material. Additionally, all chapters contain sections on strategies that investors can apply in specific situations and the pros and cons of each are also discussed. The book provides further clarification of some of the concepts discussed in the previous edition thereby offering a more detailed analysis and discussion with more real world examples. The author has added new shorter text boxes labeled Market Flash to highlight the use of or changes in current practices in the field, updates on strategies as applied by professionals, provision of useful information for an investor, updates on regulations and anything else that might be relevant in discussing and applying a concept. This second edition also includes new sections on core issues in the field of investments such as alternative investments, disruptive technologies and future trends in investment management. This textbook is intended for undergraduate students majoring or minoring in finance and also for students in economics and related disciplines who wish to take an elective course in finance or investments.

A Course in Microeconomic Theory David M. Kreps, 2020-05-26 David M. Kreps has developed a text in microeconomics that is both challenging and user friendly. The work is designed for the first year graduate microeconomic theory course and is accessible to advanced undergraduates as well. Placing unusual emphasis on modern noncooperative game theory, it provides the student and instructor with a unified treatment of modern microeconomic theory, one that stresses the behavior of the individual actor, consumer or firm, in various institutional settings. The author has taken special pains to explore the fundamental assumptions of the theories and techniques studied, pointing out both strengths and weaknesses. The book begins with an exposition of the standard models of choice and the market, with extra attention paid to choice under uncertainty and dynamic choice. General and partial equilibrium approaches are blended so that the student sees these approaches as points along a continuum. The work then turns to more modern developments. Readers are introduced to noncooperative game theory and shown how to model games and determine solution concepts. Models with incomplete information, the folk theorem and reputation and bilateral bargaining are covered in depth. Information economics is explored next. A closing discussion concerns firms as organizations and gives readers a taste of transaction cost economics.

Economic Growth Theory Wei-Bin Zhang, 2018-01-18 This book develops a new theoretical framework to examine the issues of economic growth and development. Providing analysis of economic dynamics in a competitive economy under government intervention in infrastructure and income distribution, the book develops a unique analytical framework under the influence of traditional neoclassical growth theory. However, in a departure from neoclassical growth theory, it examines

both the Solow Swan and the Ramsey growth models introducing a utility function which treats consumer choices in ways critically different to previous approaches Using practical examples and models the book demonstrates how this new direction can effectively analyze the key issues of economic growth in a compact and comprehensive manner [Economics Reading Lists, Course Outlines, Exams, Puzzles & Problems: Microeconomics course materials](#) ,1981 [Exploring Microeconomics](#) Robert L.
