Visualization in Modern Cartography A.M. MacEachren, D.R. Fraser Taylor, 2013-10-22 Visualization in Modern Cartography explores links between the centuries old discipline of cartography and today's revolutionary developments in scientific visualization The book has three main goals 1 to pass on design and symbolization expertise to the scientific visualization community information that comes from centuries of pre computer visualization by cartographers and their more recent experiences with computerizing the discipline 2 to help cartographers cope with the dramatic shift from print

cartography to a dynamic virtual cartography for which their role is changing from that of map designer to one of spatial information display and or interface designer 3 to illustrate the expanded role for cartography in geographic environmental planning and earth science applications that comes with the development of interactive geographic visualization tools To achieve these goals the book is divided into three parts The first sets the historical cognitive and technological context for geographic cartographic visualization tool development The second covers key technological symbolization and user interface issues The third provides a detailed look at selected prototype geographic cartographic visualization tools and their applications

Handbook of Zoonoses, Section B George W. Beran,2017-12-06 This multivolume handbook presents the most authoritative and comprehensive reference work on major zoonoses of the world The Handbook of Zoonoses covers most diseases communicable to humans as well as those diseases common to both animals and humans It identifies animal diseases that are host specific and reviews the effects of various human diseases on animals Discussions address diseases that remain important public and animal health problems and the techniques that can control and prevent them The chapters are written by internationally recognized scientists in their respective areas of disease who work or have worked extensively

in the most affected areas of the world The emphasis for each zoonosis is on the epidemiology of the disease the clinical syndromes and carrier states in infected animals and humans and the most current methods for diagnosis and approaches to control For infectious agents or biologic toxins which may be transmitted by foods of animal origin a strong focus is placed on food safety measures The etiologic and therapeutic aspects of each disease important to epidemiology and control are identified

Macroclimate and Plant Forms Elgene E. O. Box, 2012-12-06 This study arose out of the old question of what actually determines vegetation structure and distributions Is climate the overriding control as one would suppose from reading the more geographically oriented literature Or is climate only incidental as suggested by more site and or taxon oriented writers The question might be phrased more realistically How much does climate control vegetation processes structures and distributions It seemed to me as an ambitious doctoral student that one way to attempt an answer might be to try to predict world vegetation from climate alone and then compare the predicted results with actual vegetation patterns If climatic data were sufficient to reproduce the world's actual vegetation patterns then one could conclude that climate is the main control This book represents an expanded second generation version of that original thesis It presents world scale vegetation and ecoclimatic models and a methodology for applying such models to predict vegetation and for evaluating model results This approach also provides a means of geographical simulation of vegetation patterns and changes which represent necessary data inputs in other fields such as atmospheric chemistry and biogeochemical cycling It has been fairly well accepted that climatic and other environmental conditions are associated with the evolution of particular aspects of plant form convergent evolution The particular configurations of plant size photosynthetic surface area and structure e g sclerophylly stomatal resistance and their seasonal variations represent what one can recognize fairly readily as distinct growth forms
