Week 12 (2019)
Exercise 1 (10 points)

Question

1. Name physiological problems/conditions that at high altitude are most common besides blood oxygen saturation. Describe the typical response/compensation.
2. Explain how the altitude-related ventilatory drive can be related to hypoxemia by feedback involving acid levels in body fluids.
3. How can it be that that both a reduced ventilation and a hyperventilation are observed and thought that the amount of oxygen, nitrogen and carbon dioxide that is used (and thus oxygen) would be increased/constant and that not?
4. After several days, there will be some acclimatization to the above issues (and other ways) mentioned. How does your ventilation then get related to the amount of oxygen in the lungs and how the ventilation will get in the hyperventilatory problem the hyperventilation related. How can it be that the amount of oxygen is related to the amount of the CO₂?
5. How is the CO₂ levels (hyperventilation) related to the amount of oxygen and the amount of the CO₂?

Answer

1. When coming to high altitude, your body produces more red blood cells, i.e. RBCs, which transport oxygen to the tissues with hemoglobin.
2. When hyperventilating, you reduce the partial pressure of CO₂ in the blood, which is related to the amount of oxygen and the amount of the CO₂ in the blood.
3. When hyperventilating at high altitude, the amount of oxygen in the lungs is related to the amount of the CO₂ in the lungs. The amount of oxygen in the lungs is related to the amount of the CO₂ in the lungs. The amount of oxygen in the lungs is related to the amount of the CO₂ in the lungs.

Question

1. Explain how the amount of red blood cells and the amount of oxygen in the blood are related to the amount of the CO₂ in the blood.

Answer

1. The amount of red blood cells and the amount of oxygen in the blood are related to the amount of the CO₂ in the blood. The amount of red blood cells and the amount of oxygen in the blood are related to the amount of the CO₂ in the blood.
2. The amount of red blood cells and the amount of oxygen in the blood are related to the amount of the CO₂ in the blood. The amount of red blood cells and the amount of oxygen in the blood are related to the amount of the CO₂ in the blood.
