This application note is for informational purposes. Antenna design requires suitable test equipment and know-how for optimal performance. It is strongly advised that the professional services of firms specializing in the design and placement of antennas be sought out. Cypress can provide a list of suitable antenna design specialists, if requested.

AN91445 explains antenna design in simple terms and provides guidelines for RF component selection, matching network design, and layout design. This application note also recommends two Cypress-tested PCB antennas that can be implemented at a very low cost for use with the Bluetooth Low Energy (BLE) solutions that are part of Cypress's PSoC® and PSoC™ families. For information on WiCed® Smart BLE solutions, see the WiCed community product guide page. The PSoC BLE, PSoC 4 BLE, and PSoC 6 MCU with Bluetooth Low Energy (BLE) Connectivity 2.4-GHz radio must be carefully matched to its antenna for optimum performance.

Antennas for Multi-band RF

Front-end Modules Kevin Robert Boyle, 2004-01-01 This is a Ph D dissertation This thesis is about the design of multi band antennas and RF front end circuits for wireless portable devices Mobile phones are selected for detailed study since due to their small size and operation in close proximity to the user they are particularly difficult to design for A key element of the thesis is that the antenna and RF circuitry are co designed All aspects of design are considered at first independently and then simultaneously The size constraints of mobile phones are such that the fundamental limits of antenna size bandwidth and efficiency must be well understood as should the limits of any enhancements that are possible using circuitry It is shown that simple circuitry can be used to approximately double the antenna bandwidth but that very good quality circuit components are required in order that bandwidth is not simply traded for a loss of efficiency Since the antenna is strongly influenced by conductive parts of the mobile phone the effect of the supporting PCB is also considered Indeed it is shown that

the supporting PCB is often the dominant radiator in a typical mobile phone construction *Antenna Design for Mobile Devices* Zhijun Zhang, 2017-06-13 Expanded and updated this practical guide is a one stop design reference containing all an engineer needs when designing antennas Integrates state of the art technologies with a special section for step by step antenna design Features up to date bio safety and electromagnetic compatibility regulation compliance and latest standards Newly updated with MIMO antenna design measurements and requirements Accessible to readers of many levels from introductory to specialist Written by a practicing expert who has hired and trained numerous engineers
