Affect and Emotion in

Human-Computer Interaction Christian Peter, Russell Beale, 2008-08-25 Affect and emotion play an important role in our everyday lives. They are present whatever we do, wherever we are, and wherever we go without us being aware of them for much of the time. When it comes to interaction, be it with humans, technology, or humans via technology, we suddenly become more aware of emotion, either by seeing the other's emotional expression or by not getting an emotional response while anticipating one. Given this, it seems only sensible to explore affect and emotion in human-computer interaction, to investigate the underlying principles, to study the role they play, to develop methods to quantify them, and to finally build applications that make use of them. This is the research field for which, over ten years ago, Rosalind Picard coined the phrase "affective computing." The present book provides an account of the latest work on a variety of aspects related to affect and emotion in human-technology interaction. It covers theoretical issues, user experience, and design aspects, as well as sensing issues and reports on a number of affective applications that have been developed in recent years.

Built to Love Peter

Boatwright, Jonathan Cagan, 2010-09-13 Offers data-driven proof that products and services appealing to customers' emotional needs outsell the competition. Provides a clear method and set of tools to enable companies to develop high-emotion products and services. Includes case examples from a wide variety of industries. Emotion is the single greatest lever in building enduring relationships with customers; it's what makes them not just purchase a product or service but get excited about it. Leading companies do more than produce things that work better; they address their customers' emotional needs; they make them feel better. But this isn't something you can add on after the fact. Your products and services must be built to love from the very start. This book shows you how. Peter Boatwright and Jonathan Cagan have worked on product and brand strategy with market leaders like Apple, Whirlpool, International Truck, PGE, and many others. They've found that to really connect with customers' emotions, must be generated by the product itself, not simply tacked on through advertising. And they prove the bottom-line value of product-driven emotion by analyzing the stock performance of companies that sell high-emotion products and through data that show people are willing to pay more for products with emotionally rich features. After showing that authentic product emotion really does pay off, they move on to how emotion can be broken down into its core building blocks, how it is then used to develop new products and services, and how product touchpoints, in particular visual touchpoints, deliver those emotions. Engaging case studies from a variety of industries will help you understand how to integrate emotion into your products and services, regardless of the nature of your business. Emotion is fundamental to all that is human, including the products we enjoy. Built to Love will help you gain loyal, even fanatical customers by going beyond mere efficiency and speaking to their deepest needs and wants.
