ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques Collected Papers III Serge Lang, 2000-07-19 Serge Lang is not only one of the top

mathematicians of our time but also an excellent writer He has made innumerable and invaluable contributions in diverse fields of mathematics and was honoured with the Cole Prize by the American Mathematical Society as well as with the Prix Carriere by the French Academy of Sciences Here 83 of his research papers are collected in four volumes ranging over a variety of topics of interest to many readers **Geometric Complex Analysis - Proceedings Of The Third International**

This proceedings is a collection of articles in several complex variables with emphasis on geometric methods and results which includes several survey papers reviewing the development of the topics in these decades Through this volume one can see an active field providing insight into other fields like algebraic geometry dynamical systems and partial differential equations

Hilbert's Tenth Problem: Relations with Arithmetic and Algebraic Geometry Jan Denef, 2000 This book is the result of a meeting that took place at the University of Ghent Belgium on the relations between Hilbert's tenth problem arithmetic and algebraic geometry Included are written articles detailing the lectures that were given as well as contributed papers on current topics of interest The following areas are addressed an historical overview of Hilbert's tenth problem Hilbert's tenth problem for various rings and fields model theory and local global principles including relations between model theory and algebraic groups and analytic geometry conjectures in arithmetic geometry and the structure of diophantine sets for example with Mazur's conjecture Lang's conjecture and Bombieri's problem and results on the complexity of diophantine geometry highlighting the relation to the theory of computation The volume allows the reader to learn and compare different approaches arithmetical geometrical topological model theoretical and computational to the general structural analysis of the set of solutions of polynomial equations It would make a nice contribution to graduate and advanced graduate courses on logic algebraic geometry and number theory

Finite or Infinite Dimensional Complex Analysis and Applications Le Hung Son, Wolfgang Tutschke, Chung-Chun Yang, 2013-12-01 There is almost no field in Mathematics which does not use Mathematical Analysis Computer methods in Applied Mathematics too are often based on statements and procedures of Mathematical Analysis An important part of Mathematical Analysis is Complex Analysis because it has many applications in various branches of Mathematics Since the field of Complex Analysis and its applications is a focal point in the Vietnamese research programme the Hanoi University of Technology organized an International Conference on Finite or Infinite Dimensional Complex Analysis and Applications which took place in Hanoi from August 8-12 2001 This conference was the 9th one in a series of conferences which take place alternately in China Japan Korea and Vietnam each year The first one took place at Pusan University in Korea in 1993 The preceding 8 conference was held in Shandong in China in August 2000 The 9th conference of the series was the first one which took place above mentioned series of conferences in Vietnam Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research directions 1 Value distribution theory including meromorphic functions meromorphic mappings as well as p-adic functions over fields of finite or zero characteristic and its applications 2 Holomorphic functions in several finitely or infinitely many complex variables 3 Clifford Analysis i.e complex methods in higher dimensional real Euclidean spaces 4 Generalized analytic functions

European Congress of Mathematics Ari Laptev, 2005 The European Congress of Mathematics held every four years has established itself as a major international

mathematical event Following those in Paris 1992 Budapest 1996 and Barcelona 2000 the Fourth European Congress of Mathematics took place in Stockholm Sweden June 27 to July 2 2004 with 913 participants from 65 countries Apart from seven plenary and thirty three invited lectures there were six Science Lectures covering the most relevant aspects of mathematics in science and technology Moreover twelve projects of the EU Research Training Networks in Mathematics and Information Sciences as well as Programmes from the European Science Foundation in Physical and Engineering Sciences were presented Ten EMS Prizes were awarded to young European mathematicians who have made a particular contribution to the progress of mathematics Five of the prizewinners were independently chosen by the 4ECM Scientific Committee as plenary or invited speakers The other five prizewinners gave their lectures in parallel sessions Most of these contributions are now collected in this volume providing a permanent record of so much that is best in mathematics today

Complex Analysis and Dynamical Systems VII Mark L. Agranovsky, Matania Ben-Artz, Catherine Bénéteau, Lavi Karp, Dmitry Khavinson, Simeon Reich, David Shkheoit, Gilbert Weinstein, Lawrence Zalcman, 2017 A co publication of the AMS and Bar Ilan University This volume contains the proceedings of the Seventh International Conference on Complex Analysis and Dynamical Systems held from May 10 15 2015 in Nahariya Israel The papers in this volume range over a wide variety of topics in the interaction between various branches of mathematical analysis Taken together the articles collected here provide the reader with a panorama of activity in complex analysis geometry harmonic analysis and partial differential equations drawn by a number of leading figures in the field They testify to the continued vitality of the interplay between classical and modern analysis

Introduction to Complex Hyperbolic Spaces Serge Lang, 2013-03-09 Since the appearance of Kobayashi's book there have been several results at the basic level of hyperbolic spaces for instance Brody's theorem and results of Green Kiernan Kobayashi Noguchi etc which make it worthwhile to have a systematic exposition Although of necessity I reproduce some theorems from Kobayashi I take a different direction with different applications in mind so the present book does not supersede Kobayashi's My interest in these matters stems from their relations with diophantine geometry Indeed if X is a projective variety over the complex numbers then I conjecture that X is hyperbolic if and only if X has only a finite number of rational points in every finitely generated field over the rational numbers There are also a number of subsidiary conjectures related to this one These conjectures are qualitative Vojta has made quantitative conjectures by relating the Second Main Theorem of Nevanlinna theory to the theory of heights and he has conjectured bounds on heights stemming from inequalities having to do with diophantine approximations and implying both classical and modern conjectures Noguchi has looked at the function field case and made substantial progress after the line started by Grauert and Grauert Reckziegel and continued by a recent paper of Riebesehl The book is divided into three main parts the basic complex analytic theory differential geometric aspects and Nevanlinna theory Several chapters of this book are logically independent of each other

Ultrametric Functional Analysis Bertin Diarra, 2005 With contributions by leading

functional analysis and algebra Advanced Topics in the Arithmetic of Elliptic Curves Joseph H. Silverman, 2013-12-01 In the introduction to the first volume of *The Arithmetic of Elliptic Curves* Springer Verlag 1986 I observed that the theory of elliptic curves is rich varied and amazingly vast and as a consequence many important topics had to be omitted I included a brief introduction to ten additional topics as an appendix to the first volume with the tacit understanding that eventually there might be a second volume containing the details You are now holding that second volume it turned out that even those ten topics would not fit Unfortunately into a single book so I was forced to make some choices The following material is covered in this book I Elliptic and modular functions for the full modular group II Elliptic curves with complex multiplication III Elliptic surfaces and specialization theorems IV Neron models Kodaira Neron classification of special fibers Tate s algorithm and Ogg s conductor discriminant formula V Tate s theory of q -curves over p -adic fields VI Neron s theory of canonical local height functions **The Dynamical Mordell-Lang Conjecture** Jason P. Bell, Dragos Ghioca, Thomas J.

Tucker, 2016-04-20 The Dynamical Mordell Lang Conjecture is an analogue of the classical Mordell Lang conjecture in the context of arithmetic dynamics It predicts the behavior of the orbit of a point x under the action of an endomorphism f of a quasiprojective complex variety X More precisely it claims that for any point x in X and any subvariety V of X the set of indices n such that the n -th iterate of x under f lies in V is a finite union of arithmetic progressions In this book the authors present all known results about the Dynamical Mordell Lang Conjecture focusing mainly on a p -adic approach which provides a parametrization of the orbit of a point under an endomorphism of a variety *Five Decades as a Mathematician and Educator* Yung-Chow Wong, Kai-Yuen Chan, Ming-Chit Liu, 1995 This volume includes topics such as invariants of strongly pseudoconvex CR manifolds the integral formulas of the Pontrjagin characteristic forms on an oriented differentiable manifold the construction of tensor fields and connections on the frame bundle and cellular manufacturing systems

topology of non isolated singularities gauge theory on resolutions of simple singularities and residues of foliations The articles give accounts of research in these fast developing areas Much of the material appears here for the first time in print Titles in this series are co published with International Press Cambridge MA USA **Analysis And Mathematical Physics** Shaun Bullett,Tom Fearn, Frank Smith, 2016-12-22 This is a concise reference book on analysis and mathematical physics leading readers from a foundation to advanced level understanding of the topic This is the perfect text for graduate or PhD mathematical science students looking for support in topics such as distributions Fourier transforms and microlocal analysis C Algebras value distribution of meromorphic functions noncommutative differential geometry differential geometry and mathematical physics mathematical problems of general relativity and special functions of mathematical physics Analysis and Mathematical Physics is the sixth volume of the LTCC Advanced Mathematics Series This series is the first to provide advanced introductions to mathematical science topics to advanced students of mathematics Edited by the three joint heads of the London Taught Course Centre for PhD Students in the Mathematical Sciences LTCC each book supports readers in broadening their mathematical knowledge outside of their immediate research disciplines while also covering specialized key areas **Rational Points on Algebraic Varieties** Emmanuel Peyre, Yuri Tschinkel, 2012-12-06 This book is devoted to the study of rational and integral points on higher dimensional algebraic varieties It contains carefully selected research papers addressing the arithmetic geometry of varieties which are not of general type with an emphasis on how rational points are distributed with respect to the classical Zariski and adelic topologies The present volume gives a glimpse of the state of the art of this rapidly expanding domain in arithmetic geometry The techniques involve explicit geometric constructions ideas from the minimal model program in algebraic geometry as well as analytic number theory and harmonic analysis on adelic groups
