the massive Pacific salmon fishery Longo Clausen and Clark describe how new fishing technologies transformations in ships and storage capacities and the expansion of seafood markets combined to alter radically and permanently these crucial ecosystems In doing so the authors underscore how the particular organization of social production contributes to ecological degradation and an increase in the pressures placed upon the ocean The authors highlight the historical political economic and cultural forces that shape how we interact with the larger biophysical world A path breaking analysis of overfishing The Tragedy of the Commodity yields insight into issues such as deforestation biodiversity loss pollution and climate change
