An Introduction To Linear Algebra L Mirsky:

An Introduction to Linear Algebra Leonid Mirsky, 1990-01-01 The straight forward clarity of the writing is admirable American Mathematical Monthly This work provides an elementary and easily readable account of linear algebra in which the exposition is sufficiently simple to make it equally useful to readers whose principal interests lie in the fields of physics or technology The account is self contained and the reader is not assumed to have any previous knowledge of linear algebra Although its accessibility makes it suitable for non mathematicians Professor Mirsky's book is nevertheless a systematic and rigorous development of the subject Part I deals with determinants vector spaces matrices linear equations and the representation of linear operators by matrices Part II begins with the introduction of the characteristic equation and goes on to discuss unitary matrices linear groups functions of matrices and diagonal and triangular canonical forms Part II is concerned with quadratic forms and related concepts Applications to geometry are stressed throughout and such topics as rotation reduction of quadrics to principal axes and classification of quadrics are treated in some detail An account of most of the elementary inequalities arising in the theory of matrices is also included Among the most valuable features of the book are the numerous examples and problems at the end of each chapter carefully selected to clarify points made in the text

Linear Algebra Georgii Evgen'evich Shilov, 1977-06-01 Covers determinants linear spaces systems of linear equations linear functions of a vector argument coordinate transformations the canonical form of the matrix of a linear operator bilinear and quadratic forms Euclidean spaces unitary spaces quadratic forms in Euclidean and unitary spaces finite dimensional space Problems with hints and answers **An Introduction to Linear Algebra. Applied Matrix Algebra in the Statistical Sciences Alexander Basilevsky, 2013-01-18 This comprehensive text offers teachings relevant to both applied and theoretical branches of matrix algebra and provides a bridge between linear algebra and statistical models Appropriate for advanced undergraduate and graduate students 1983 edition **Linear Dependence** Sydney N. Afriat, 2012-12-06 Deals with the most basic notion of linear algebra to bring emphasis on approaches to the topic serving at the elementary level and more broadly A typical feature is where computational algorithms and theoretical proofs are brought together Another is respect for symmetry so that when this has some part in the form of a matter it should also be reflected in the treatment Issues relating to computational method are covered These interests may have suggested a limited account to be rounded out suitably However this limitation where basic material is separated from further reaches of the subject has an appeal of its own To the elementary operations method of the textbooks for doing linear algebra Albert Tucker added a method with his pivot operation Here there is a more primitive method based on the linear dependence table and yet another based on rank reduction The determinant is introduced in a completely unusual upside down fashion where Cramer s rule comes first Also dealt with is what is believed to be a completely new idea of the alternant a function associated with the affine space the way the determinant is with the linear space with $n + 1$ vector arguments as the determinant has n Then for affine or barycentric coordinates we find a rule which is an unprecedented exact counterpart of Cramer s rule for linear coordinates where the alternant takes on the role of the determinant These are among the more distinct or spectacular items for possible novelty or unfamiliarity Others with or without some remark may be found scattered in different places Selected Papers Of Alan J Hoffman (With Commentary) Charles A Micchelli, 2003-08-25 Dr Alan J Hoffman is a pioneer in linear programming combinatorial optimization and the study of graph spectra In his principal research interests which include the fields of linear inequalities combinatorics and matrix theory he and his collaborators have contributed fundamental concepts and theorems many of which bear their names This volume of Dr Hoffman s selected papers is divided into seven sections geometry combinatorics matrix inequalities and eigenvalues linear inequalities and linear programming combinatorial optimization greedy algorithms graph spectra Dr Hoffman has supplied background
