Latest Trends in Engineering and Technology Sajjan Singh, Sarabpreet Kaur, 2024-06-28 We are very pleased to introduce the proceedings of the International Conference on Latest Trends in Engineering and Technology ICLTET 2023. Papers were well presented in the conference in the fields of Artificial Intelligence, Machine Learning, IOT, Communication Networks, Mechanical Engineering, Civil Engineering, Nano Material Research, Business Management, and many more to arouse a high level of interest. The presented papers maintained the high promise suggested by the written abstracts and the program was chaired in a professional and efficient way by the session chair who were selected for their expertise in the subject. The number of delegates was also highly gratifying, showing the high level of interest in the subject. This Proceeding provides the permanent record of what was presented. They indicate the state of development at the time of writing of all aspects of this important topic and will be invaluable to all academicians and researchers in the field for that reason. Finally, it is appropriate that we record our thanks to our fellow members of the Technical Organizing Committee for encouraging participation from those areas. We are also indebted to those who served as session chair and reviewers without their support the conference could not have been the success that it was. We also acknowledge the authors themselves without whose expert input there would have been no conference. Their efforts made a great contribution to its success. System and Architecture Sunil Kumar Muttoo, 2018-05-15 This book comprises the select proceedings of the annual convention of the Computer Society of India. Divided into 10 topical volumes, the proceedings present papers on state of the art research, surveys, and succinct reviews. The volumes cover diverse topics ranging from parallel processing to system buses and from computer architecture to VLIW (very long instruction word). This book focuses on systems and architecture. It aims at informing the readers about those attributes of a system visible to a programmer. This book also deals with various innovations and improvements in computing technologies to improve the size, capacity, and performance of modern day computing systems. The contents of this book will be useful to professionals and researchers alike. *New Technologies for Supercolliders* L. Cifarelli, Thomas Ypsilantis, 2012-12-06 The present volume is based on the proceedings of the 12th Workshop of the INFN ELOISATRON Project held at the Ettore Majorana Centre for Scientific Culture EMCS-C Erice, Frapani, Sicily, Italy, in the period September 15-20, 1990. The proceedings deal with the presentation of New Technologies for Supercolliders. Three new energy frontiers, 16, 40, and 200 TeV, are now opened up for the future of Subnuclear Physics. Basic problems above the Fermi energy are crowding up, but no one knows the energy levels needed for their solution. This is why the technology for experiments with the new generation of Supercolliders needs to be pursued, having in mind the problems which are of common interest in the three energy frontiers. The primary purpose of the Workshop was to contribute towards the highest energy limit in the search for new instruments and new technologies. Furthermore, the present status and performances of various detector technologies were reviewed. The possible options for a powerful apparatus whose goal would be the discovery of the top

Higgs and SUSY particles in a very high energy high rate environment were finally analysed The Workshop was sponsored by the Italian National Institute for Nuclear Physics INFN the Italian Ministry of Education the Italian Ministry of Scientific and Technological Research and the Sicilian Regional Government We are thankful to the staff of EMCSC for their efficient and warm support
