Abstract: This study presents an aerostructural optimization process for wind turbine blades aimed at enhancing the turbine's performance. The optimization framework integrates DAFOam as the computational fluid dynamics (CFD) solver, TACS as the finite element method (FEM) solver, Mphys for fluid–structure coupling, and SNOPT as the optimizer within the OpenMDAO framework. The objective is to simultaneously increase the torque generated by the wind turbine while decreasing the mass of the blade, thereby improving its efficiency. The design variables in this optimization process are the blade shape and panel thickness. The aerodynamic objective function is torque, a key performance indicator for wind turbine efficiency. The structural objective function is the blade mass, as reducing mass is essential to minimize material and manufacturing costs. The optimization process utilizes the integrated capabilities of DAFOam, TACS, Mphys, and SNOPT to iteratively evaluate and modify the blade shape and panel thickness. The OpenMDAO framework facilitates seamless communication between the solvers and the optimizer, ensuring a well-coordinated, efficient optimization process. The results of the optimization show a 6.78% increase in torque, which indicates a significant improvement in the wind turbine's energy production capacity. Additionally, a 4.22% decrease in blade mass demonstrates a successful reduction in material usage without compromising structural integrity. These findings highlight the potential of the proposed aerostructural optimization process to enhance the performance and cost-effectiveness of wind turbine blades, contributing to the advancement of sustainable energy solutions. This work represents the first attempt to implement DAFOam for wind turbine aerostructural design optimization.

1. Introduction

The development of renewable energy sources has become a priority for emerging nations because of the volatile energy market, the depletion of fossil fuels, and deteriorating environmental conditions. The fundamental idea behind using renewable energy is that it comes from ongoing natural processes. As a result, emerging nations reject the use of fossil fuels and migrate to other sources of energy like wind and solar. The majority of these renewable energy sources significantly reduce CO₂ emissions, as suggested by the Intergovernmental Panel on Climate Change (IPCC) [1].

Renewable energy is produced from natural resources that replenish themselves naturally and without human intervention. Wind energy is one of the renewable energy sources that is growing the quickest. As a result, harnessing wind energy to generate electricity is more economical than using coal or gas-fired power plants. Despite all of its

brink of an energy disaster due to the rapidly rising global need for energy. Additionally, the widespread usage of fossil fuel based energy resources is aggravating global warming and harming the environment. However, there are reliable and eco friendly substitutes to fossil fuels, for example, wind and many other sustainable energies. Considering its low operational costs and easy accessibility, wind is among the most cost effective and efficient renewable energies. With the increased use of wind energy, the need for storage has become critical. In addition to various storage procedures, fuel cells and batteries are two primary sources of compensation for RE systems. The wind technological system is on the cusp of development but numerous improvements are required to make this technology overall cost efficient. In this book, various energy storage and conversion methods for wind power applications are explored. Additionally, this work covers the costs associated with electrical output in wind powered power plants as well as the financial and environmental plans that describe the installation of wind technology systems.

Wind Turbine Aerodynamics Wen Zhong Shen, 2019-10-04 Wind turbine aerodynamics is one of the central subjects of wind turbine technology. To reduce the levelized cost of energy (LCOE), the size of a single wind turbine has been increased to 12 MW at present, with further increases expected in the near future. Big wind turbines and their associated wind farms have many advantages but also challenges. The typical effects are mainly related to the increase in Reynolds number and blade flexibility. This Special Issue is a collection of 21 important research works addressing the aerodynamic challenges appearing in such developments. The 21 research papers cover a wide range of problems related to wind turbine aerodynamics, which includes atmospheric turbulent flow modeling, wind turbine flow modeling, wind turbine design, wind turbine control, wind farm flow modeling in complex terrain, wind turbine noise modeling, vertical axis wind turbine, and offshore wind energy. Readers from all over the globe are expected to greatly benefit from this Special Issue collection regarding their own work and the goal of enabling the technological development of new environmentally friendly and cost effective wind energy systems in order to reach the target of 100% energy use from renewable sources worldwide by 2050.

Designing Engineering Structures using Stochastic Optimization Methods Levent Aydin, H. Sevil Artem, Selda Oterkus, 2020-04-27 Among all aspects of engineering design is the most important step in developing a new product. A systematic approach to managing design issues can only be accomplished by applying mathematical optimization methods. Furthermore, due to the practical issues in engineering problems, there are limitations in using traditional methods. As such stochastic optimization methods such as differential evolution, simulated annealing, and genetic algorithms are preferable in finding solutions in design optimization problems. This book reviews mechanical engineering design optimization using stochastic methods. It introduces students and design engineers to practical aspects of complicated mathematical optimization procedures and outlines steps for a wide range of selected engineering design problems.
