twentieth century First published in 1963 *Design with Climate* was one of the most pioneering books in the field and remains an important reference for practitioners teachers and students over fifty years later In this book Victor Olgyay explores the impact of climate on shelter design identifying four distinct climatic regions and explaining the effect of each on orientation air movement site and materials He derives principles from biology engineering meteorology and physics and demonstrates how an analytical approach to climate management can merge into a harmonious and aesthetically sound design concept This updated edition contains four new essays that provide unique insights on issues of climate design showing how Olgyay's concepts work in contemporary practice Ken Yeang John Reynolds Victor W Olgyay and Donlyn Lyndon explore bioclimatic design eco design and rational regionalism while paying homage to Olgyay's impressive groundwork and contributions to the field of architecture *Design with Climate* Victor Olgyay, 1992 *Design with climate; bioclimatic approach to architectural regionalism* V. Olgyay, 1969 *Drawing Climate* Daniel Ryan, Jennifer Ferng, Erik L'Heureux, 2021-11-08 Ephemeral phenomena like fire precipitation shade and wind have emerged as important contemporary protagonists for environmental design due to their dynamic impact on buildings and cities The importance of including these forces in architecture has gained rapid momentum in the global quest for sustainability This book investigates the history theory and applications of climatic design in the built environment examining architecture and landscapes from various time periods Based on a collaboration between the University of Sydney and the National University of Singapore the book brings together contributing authors from Australia Singapore and the United States Dry Wet Cool and Hot divide the book into categories through which a wide array of representational topics are covered from dust storms and clouds to ice and bushfires A concluding section presents project examples for exploratory application in the design of architecture *Design for Climate Change* Bill Gething, William Gething, Katie Puckett, 2013 Adapting to climate change is a pressing concern for the construction sector Our built environment and the way buildings are designed constructed and managed has evolved in response to a climate that has been broadly consistent for hundreds of years to come Within a generation our buildings may have to cope under very different conditions **The Green Imperative: Ecology and Ethics in Design and Architecture** Victor Papanek, 2022-02-01 A fresh edition of the sustainable design pioneer Victor Papanek's classic and ever relevant book examining the important role of design in combating climate change Whether it's horror at the plastic littering the world's beaches or despair at the melting polar ice caps the world is gradually waking up to the impending climate disaster In *The Green Imperative* Papanek argues for design that addresses these issues head on This means using materials that can be recycled and reused no more pointless packaging thinking about how products make us feel and engage all our senses putting nature at the heart of design working at a smaller scale rejecting aesthetics for their own sake and thinking before we buy First published at the end of the twentieth century this book offered a plethora of honest advice clear examples and withering critiques laying out the flaws of and opportunities for the design world at that time A quarter of a century on

Papanek's lucid prose has lost none of its verve and the problems he highlights have only become more urgent giving today's reader both a fascinating historical perspective on the issues at hand and a blueprint for how they might be solved

Designing for Climate Hollis Austin, Massachusetts College of Art. Industrial Design Department, 1971 **Saving The Planet By Design** Ken Yeang, 2019-10-08 Can we save the Planet For a resilient durable and sustainable future for human society we need to repurpose reinvent redesign remake and recover our human made world so that our built environment is benignly and seamlessly biointegrated with Nature to function synergistically with it These are the multiple tasks that humanity must carry out imminently if there is to be a future for human society and all lifeforms and their environments on the Planet Addressing this is the most compelling question for those whose daily work impacts on Nature such as architects engineers landscape architects town planners environmental policy makers builders and others but it is a question that all of humanity needs to urgently address Presented here are two key principles as the means to carry out these tasks ecocentricity being guided by the science of ecology and ecomimesis as designing and making the built environment including all artefacts based on the emulation and replication of the ecosystem concept Designing with ecology is contended here as the authentic approach to green design from which the next generation of green design will emerge going beyond current use of accreditation systems For those who subscribe to this principle this is articulated here showing how it can be implemented by design Adopting these principles is fundamental in our endeavour to save our Planet Earth and changes profoundly and in entirety the way we design make manage and operate our built environment **Climate and Architecture** United States.
