Paramecia are single-celled organisms that can survive in a wide range of salinities. However, we need quantitative evidence to show how their osmoregulatory systems adapt to different salt concentrations. I will investigate whether the total solute concentration for osmosis that sustains the paramecia.

Paramecia exposed to hypertonic solutions undergo crenation, becoming shriveled. When introduced to different groups of paramecia in tanks of different salinities, the data shows that their osmoregulatory systems adapt to different levels of osmotic pressure. In each group of paramecia, the total solute concentration (Table 1).
