Basic content can be found in its prerequisite textbook *2D Computer Vision: Principles, Algorithms, and Applications*, including the basic principles, typical methods, and practical techniques. It is intended for graduate courses on related topics, e.g. *Computer Vision*, *3D Computer Vision*, *Graphics*, *Artificial Intelligence*, etc. The book is mainly based on my lecture notes for several undergraduate and graduate classes I have offered over the past several years, while a number of topics stem from my research publications co-authored with my students. This book takes into account the needs of learners with various professional backgrounds as well as those of self-learners. Furthermore, it can be used as a reference guide for practitioners and professionals in related fields. To aid in comprehension, the book includes a wealth of self-test questions with hints and answers. On the one hand, these questions help teachers to carry out online teaching and interact with students during lectures; on the other, self-learners can use them to assess whether they have grasped the key content.
