Precalculus Gregory Buthusiem, Gabor Toth, 2020 **Bold Ventures** S. Raizen, E.D. Britton, 2012-12-06

This book presents comprehensive results from case studies of three innovations in mathematics education that have much to offer toward understanding current reforms in this field. Each chapter tells the story of a case in rich detail with extensive documentation and in the voices of many of the participants: the innovators, the teachers, the students. Similarly, Volume 2 of *Bold Ventures* presents the results from case studies of five innovations in science education. Volume 1 provides a cross-case analysis of all eight innovations. Many U.S. readers certainly will be very familiar with the name of at least if not all of the mathematics innovations discussed in this volume, for one example, the NCTM Standards, and probably with their general substance. Much of the education community's familiarity with these arises from the projects' own dissemination efforts. The research reported in this volume, however, is one of the few detailed studies of these innovations undertaken by researchers outside the projects themselves.

Mathematical Reviews, 1995 *Women, Minorities, and Persons with Disabilities in Science and Engineering*, 1996 *Women, Minorities, and Persons with Disabilities in Science and Engineering*, 1996, 1998-05 *Centering Humanism in STEM Education* Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal, Desiree Forsythe, 2024-09-24

Research demonstrates that STEM disciplines perpetuate a history of exclusion, particularly for students with marginalized identities. This poses problems, particularly when science permeates every aspect of contemporary American life. Institutions' repeated failures to disrupt systemic oppression in STEM has led to a mostly white, cisgender, and male scientific workforce replete with implicit and/or explicit biases. Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom. Maintaining views on science as inherently objective isolates it from the world in which it is performed. STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students' social and educational capital. We must create a STEM environment in which students with marginalized identities feel respected, listened to, and valued. We must assist students in understanding how their positionality, privilege, and power both historically and currently impacts their meaning-making and understanding of STEM.
